THREE AND A-HALF PER CENT.

THERE can, it seems to us, be no question as to the propriety of the reduction from 4 to 3½ per cent. which the Bank directors have made this week in the official rate of discount. It is certainly fully justified by the position of the Bank, as the reserve now amounts to £24,687,000, which is about £4,287,000 more than was held at this time last year, when the rate also stood at 3½ per cent., while the proportion of reserve to liabilities is now 51¼ per cent., as compared with 43¼ per cent. then. In certain quarters it has been argued that as money is pretty certain to become dearer again in the autumn, it is not worth while, and, indeed, is rather a mistake, to lower the rate now. But whether this view as to the future of the market be correct or not, the possibility of the Bank rate having to be advanced later on is no reason at all why it should be maintained now at a higher level than present circumstances warrant. Another reason urged against a reduction of the rate is that there is at present a large amount of French capital invested in bills here, which might be withdrawn if money is permitted to become much cheaper here. The Paris market, however, is still relatively much cheaper than ours, its resources are superabundant, and the Bank of France is paying out gold freely, having more of the metal than it cares to hold, especially as further large supplies are on their way from New York. Withdrawals hence of French funds, therefore, do not seem very probable, but in any case, the possibility is one that can be dealt with should it become a fact. As regards the immediate course of the market, there is already some speculation as to whether this week's lowering of the official rate is or is not the prelude to a further reduction to 3 per cent., but as to that it is too soon yet to judge.

We must first wait to see the result of the present alteration. Meanwhile the market has followed the Bank, the quotation for best three months' paper having fallen to 3 per cent., while the banks have reduced their deposit rate to 2 per cent., and the discount houses now give 2 per cent. and 2¼ per cent. respectively for money at call and notice.

PEACE AND COMMERCE.

It is fortunate that the Foreign Secretary was invited to the dinner given by the London Chamber of Commerce to their New York brethren. Lord Lansdowne introduced an element of prose into what, but for his speech, would have been one long commercial lyric. Trade is sometimes supposed to have a narrowing influence on the imagination, but no one who has read the speeches at Grocers' Hall on Wednesday will be tempted to fall into such an error. Every toast was proposed and responded to in the spirit of a Christmas hymn. Commerce means peace on earth and goodwill towards men. Spread commerce, and you will make an end of wars. The demon of discord disappears as new markets open, and new rivals invite us to a friendly rivalry which shall get possession of them. To listen to Lord Brassey it is difficult to believe that we are living in a time in which American competition is becoming a national bugbear. Every morning we are furnished with some fresh example of the ruin which this competition is alleged to be bringing upon us. We are being displaced already, we are told, from every foreign market, and we shall soon be driven from our own. Lord Brassey reads the same facts in a very different spirit. He wanted only time to dwell on "the debt we owe to the inventive skill of America," on the services it has done us "in its application to agriculture, to manufactures, to engineering, or to transportation by land and water." We wonder how many of those who listened had been shaking their heads over Sir Alfred Hickman's denunciation of this friendly rivalry in its application to Indian railways! If we turn to Lord Avebury's speech, we shall see what it is that has led Sir Alfred Hickman into error. He is evidently one of those who still believe that "if one person profits, someone else must lose"—that if orders for locomotives or for the construction of viaducts are placed with American firms instead of with English, the English firms will be the poorer by just so much as the American firms are the richer. "That is not true," says Lord Avebury. "On the contrary, both are benefited." How this benefit is reaped was explained a little later in the evening by Mr Pirrie. He admits that "the effect produced on the minds of many of his fellow-countrymen by the recent great developments in America" cannot be altogether ignored. But this competition has its uses. The precious jewel which it wears is its power to stimulate us to greater efforts. We must not allow our satisfaction at the growth of American trade to make us indifferent to the growth of our own. The prosperity and success of our neighbours is ordained for a beneficent purpose, and that purpose is the enhancement of our own prosperity and success. All this, however, is but the means to a greater end. England and the United States have a greater mission than to spread commerce. They must, in the words of Mr Morris K. Jesup, "carry to the ends of the earth the blessings of civil and religious liberty." Together—we are quoting Mr A. Foster Higgins—they must cultivate and advance "the grand, world-moving power of altruism," and determine that all wrongs shall "eventually be righted by the united efforts of the English-speaking race."

Lord Lansdowne knows but too well that there is another side to this picture. He is very far from being sure that commerce means only peace. He only claims for his countrymen a desire that, if we are to have commercial war, it shall be a war "waged according to the most considerate and decent usages of international warfare." That is a wish in which we can all share. Trade does not necessarily make men friends, nor do we think that to assume without good reason that it has this effect is at all the right way to bring it about. But it need not make men enemies, if only Governments, and politicians, and journalists will take some pains to prevent it from doing so. The reason why such glowing speeches as those at Grocers' Hall evoke in us no answering enthusiasm is not that we do not value peace, but that we value it so highly that we wish to take all possible means to maintain it. One of the most important of these means, to our thinking, is watchfulness against the causes which make the maintenance of peace difficult, and among the chief of these causes at present is trade rivalry. Lord Lansdowne put the case very accurately when he said that "the time has been left far behind when international policy depended upon the ambitions of rulers or the antipathies of the people whom they govern." International policy is governed to-day "by ambitions perhaps not less far reaching, perhaps not less exacting," and the object of these ambitions is markets. In one form or another the desire for markets influences the foreign policy of every nation. Sometimes it is new territory that is wanted; sometimes it is the aggrandisement of a distant colony; sometimes it is the concession of favourable commercial terms. But whatever it is on the surface, at bottom it is markets—some fresh opportunities of buying or selling the goods they want or have to dispose of. The passions which this desire excites are precisely the same as those which used to be excited by dynastic or territorial ambitions. They are just as well calculated to breed international hatred, and so to provoke international strife. They need not do so if the danger is realised; they are very likely to do so if the danger is not realised. There was not a word spoken on Wednesday in reference to the importance of maintaining good relations between Great Britain and the United States which we do not heartily echo. A war between these two Powers would be the greatest of calamities for both of them. But one of the most fertile causes of war has always been the belief that war is impossible, and when Lord Avebury says that "commerce is never militant" he seems to go perilously near making this belief his own. He may be quite right in holding that commerce "has done more for peace even than religion," for religion has constantly provoked wars, and, so far as we know, never stopped them. But when we consider the greatness of the interests involved in commercial rivalry, and the passions which the defence of these interests call forth, it seems as if we could never be sufficiently on our guard against underrating the difficulty of the work for which diplomacy and diplomats exist.

There is one caution, moreover, which is specially suggested by two of the speeches from which we have quoted. If peace is to be kept even between friendly and kindred nations they should be very chary of embarking in common enterprises for the redress of wrong or the extension of right. We have a striking example of the consequences of disregarding this caution in the Chinese expedition. All the conditions necessary to assure the success of such an undertaking seemed

present in abundance—a common wrong suffered, a common desire to get it redressed, a common absence of any temptation to do more than was actually demanded by the facts of the situation. Yet from the moment that the first troops landed all the Governments taking part in it have been busy in preventing the disasters which without this incessant watchfulness might at any moment have occurred. Russians and French and Germans had each their own policy to think out and their own objects to attain, and again and again it has seemed as though the pursuit of these objects must be incompatible with the maintenance of good relations with one another which were indispensable to the success of their joint enterprise. So, we fear, it would be if England and the United States were to take upon themselves to set up a reign of international chivalry which should leave no wrong unredressed upon earth. The highest and most unselfish ambitions need moderating in the interests of peace equally with the lowest and the most selfish.

THE REPORT OF THE UNITED STATES ISTHMIAN CANAL COMMISSION.

For almost a half century the Government of the United States has had under its consideration the question of constructing a ship canal across the American isthmus. Different plans for effecting this object have been suggested, and very recently Congress has gone at the task in earnest. The reports of nearly all the commissions which have been appointed to investigate the matter favour the route across Nicaragua by way of the Lake. The commission of three members appointed in 1897, which reported in 1899, declared in favour of this route, but it was still felt that the subject had not been thoroughly enough examined into in view of the claims that were freely made that it would be better to buy the incomplete works at Panama if the Government intended to invest in this kind of property. In 1899, therefore, Congress authorised the appointment of a new commission, and placed a large sum of money at their disposal for a thorough examination of the Nicaragua, the Panama, and all other possible routes. This committee was chosen by the President of the United States on June 10, 1899. It made a preliminary report to Congress last December, and it is now at work in Washington on its final report, which is expected to fill four or five large volumes.

The Commission divided itself into as many as five sub-commissions, one of these having gone to Europe to gain a knowledge of the Panama Canal at the offices of the company in Paris, afterwards inspecting the new North German Canal and the Manchester Ship Canal. Thirty-one working parties were put in the field at the Isthmus—in all, 220 engineers, who were enforced by some 600 labourers, boatmen, and other assistants employed in the various countries in which they operated. In the winter of 1900, the Commissioners themselves passed over the various routes, visiting the engineering parties in their camps. They went first to Greytown, the Atlantic terminus of the proposed Nicaragua Canal, crossing the country along the line of survey to the Pacific coast, afterward paying their respects to the president and other leading officials of the Nicaraguan Government at Managua, the capital. They sailed thence to Panama, inspecting the work which has already been done there, and being prevented from making a visit to Bogota, the Colombian capital, by reason of a revolution, returned to the capital of Costa Rica to make a friendly visit to the official chiefs of that Republic. The journey greatly instructed the commissioners, six of whom are practical engineers of distinction in the United States. Of the other three, one, the president, Mr Walker, is an admiral in the United States Navy, the second is an ex-Senator from Florida, and the third an economist, Professor Johnson, an expert on transportation questions at the University of Pennsylvania.

The Commission's report will cover all possible routes upon the isthmus, not only through Nicaragua and at Panama, but those in the so-called Darien country below Panama. There is said to be no available route between Nicaragua and Panama, but south of the latter survey there are several suggested lines for a canal. There is a territory there some 80 miles in length where the two oceans are nowhere more than 40 miles apart. No gap or depression in the mountain ridge was found in this country, however, and a tunnel would be necessary, which, if not an insuperable obstacle to the engineers, is, at any rate, a quite objectionable feature on a shipway.

The issue, therefore, is narrowed down to the Nicaragua and Panama routes. By the former the Commissioners find that the cost would be about $200,000,000 if double locks are built, and the works are made wide and deep enough to admit the largest modern steamships. The estimates call for a minimum depth of 35 feet, and a minimum bottom width of 150 feet. The whole distance from ocean to ocean is 186 miles, 100 of which are up and along the San Juan River to Nicaragua Leak, 70 through that inland and freshwater sea, and 17 through the Divide from the lake down to the Pacific Ocean. The chief difficulties to be encountered on this route are the artificial harbours at either terminus, a great dam, some cutting in swampy land and the locks, five of these being necessary on the Atlantic side, and four on the Pacific slope.

At Panama the width of the Isthmus is less than 35 miles, and the cost of completing the work which the unfortunate De Lesseps began, and his successors have carried on rather intermittently for many years, the Commissioners think will be not less than $142,000,000, without making any allowance for the purchase cost of the uncompleted property. The Commissioners state that they have been unable to get a price for the works from the French owners, but they feel convinced that this would be high enough to make the cost as much, if not more, than the $200,000,000 fixed upon as the cost of the Nicaragua undertaking.

The Commission believes that there are three questions at issue between the rival routes These are technical, economic, and political. As for the technical or engineering problem a canal by either route is looked upon as feasible. From a commercial and economical point of view the odds seem slightly to favour the Nicaragua route. The distance from San Francisco to New York is 377 miles, to New Orleans 579, and to Liverpool 386 miles less by the Nicaragua than by the Panama route. For the South American West Coast ports, however, the Panama route is to be preferred. Some of this gain in distance is only apparent, for while it would take but twelve hours for a ship to make the passage by the shorter Panama route, no less than thirty-three hours would be consumed in going from ocean to ocean by way of Lake Nicaragua.

When the political question is reached the Commissioners find that the advantages are very greatly on the side of the Nicaragua proposition, because of the concessions which the Colombian Government has granted to the Panama companies. The concession of the railroad company has ninety-nine years to run from 1867, and the canal company's concession ninety-nine years from the date of completion, the utmost limit of time for this being fixed at 1910, when the unfinished works will revert to the Colombian Republic by forfeiture, unless an extension be secured in the meantime. The concessions impose various charges and restrictions upon the company, and these are of such a kind that they militate very heavily against the Panama scheme. The Governments of Nicaragua and Costa Rica, on the other hand, are said to be free, and at the same time willing to enter into reasonable arrangements for the construction of a canal which shall be owned and controlled by the United States.

Prof. Johnson, the economic expert on the commission, offers certain calculations as to the probable traffic which the canal will enjoy, and his studies will, it is said, make up an entire volume in the final report. He estimates that the amount of shipping that will be available for the use of the canal in 1914, and the work can scarcely be completed before that year, will be about 7,500,000 tons. The increase of the

trade with the west coast of South America and with the Orient would, he estimates, swell this tonnage in the next decade 50 per cent., making the total for 1924 11,250,000 tons net register. The net register of vessels using the Suez Canal in 1899 was 8,895,630 tons, the traffic having increased at a regular rate ever since it was thrown open to the use of the world's shipping. Prof. Johnson believes that the tolls should not exceed $1 per vessel ton, since a higher rate might divert the South American west coast trade to the Straits of Magellan. The Suez Canal rates, taking account of the different methods of measurement, are about $2 per net register ton.

It is recognised that much of the round-the-world trade will still pass through the Suez Canal, and China, Japan, the Dutch East Indies, and the Straits Settlement are debatable ground even for New York. It will be somewhat farther by the Nicaragua route than by Suez through the Philippines, but all Australasia will be nearer to New York by the American canal. It is pointed out that Sydney will be only 176 miles farther away from Liverpool should British ships bound to Eastern Australia choose the westwardly route, and New Zealand will be considerably nearer to English ports by Nicaragua than by Suez. Much European trade to the East can, it is thought, be diverted from the Suez Canal, even though the distance be a little longer, if the tolls be made low enough to make it a consideration to shipowners to take the American route. Even now many vessels outbound from Europe to the East are sent home by way of America in order to take on return cargoes on the west coast of North or South America, or even at New York or Baltimore.

Of course it is understood that the Suez Canal management might also lower its charges, and there is the possibility of the French canal at Panama being completed, in which case the inter-oceanic trade in America would be divided, but the Commission is convinced that the French company will never finish its enterprise if the United States Government should begin to build at Nicaragua.

LONDON AND GLOBE OBSCURITIES.

We cannot congratulate Messrs Cloutte and Ford upon their preliminary report to the creditors and shareholders of the London and Globe Finance Corporation, which has lately made its appearance. A good deal of allowance has, of course, to be made for the liquidators of a concern with such extraordinary ramifications as the London and Globe, and it would be unreasonable to expect that Messrs Cloutte and Ford would have been able in the time at their disposal to evolve order out of chaos; but those interested have reason to complain that the report does extremely little towards providing them with the information which they entirely failed to obtain from Mr Whitaker Wright and his colleagues, either as to the real causes of the collapse or as to the financial position of the Corporation at the date of the breakdown and since. The voluntary liquidation was decided upon on January 14th last, the two gentlemen appointed to carry it out are members of well-known firms of chartered accountants, and one of them, Mr Ford, is the senior partner in the firm of Messrs Ford, Rhodes, and Ford, who throughout its existence acted as auditors of the London and Globe, and have performed the like service for several of the Corporation's subsidiary and affiliated companies. Mr Ford was, therefore, especially well equipped for dealing with the intricate and complicated issues arising out of the Corporation's default, and it is all the more unsatisfactory that in framing the report the liquidators seem to have been imbued with the spirit of vague indefiniteness which has so persistently characterised Whitaker Wright finance. In the accounts presented in December last, made up to the 5th of that month, shares in sundry undertakings were set down at £2,332,632, or £500,000 more than at the end of September, 1899, while the amount expended on the Baker Street and Waterloo Railway had been increased from £384,400 to £621,400. The increase of about £757,000 in the London and Globe holdings had been, however, accompanied by borrowing to the extent of £39,400, and a reduction of its cash at bankers from £534,500 to £113,700. Still, the operations for the period of about 14 months covered by the accounts were reported to have enabled the directors to write off a round million sterling for depreciation, and to show a profit balance of £463,700, making, with the amount brought forward, a sum of £757,100 to the credit of profit and loss account. The profit balance was carried forward, and the report stated that it was proposed to call the shareholders together again before the end of April, "by which time the directors hoped to be in a position to make a very satisfactory distribution."

It is, unfortunately, a matter of history that so far from this hopeful anticipation having been realised, the London and Globe utterly broke down just before the close of the year, and has since been followed by the collapse of its chief offshoot and partner, the British America Corporation. The creditors and shareholders of the London and Globe may be excused for having expected that as a result of investigations and negotiations extending over a period of nearly five months, the liquidators would have been in a position to show clearly whether the statement of the assets made in December last was a reliable one, and what has become of the very large profit balance appearing in the accounts presented by the directors. In place of such a statement the creditors and shareholders are told that when the liquidators took over the affairs of the Corporation, they found that practically the whole of the securities were pledged for advances amounting to less than £600,000, or but little more than 25 per cent. of the amount at which the shares in sundry companies were taken in the last balance-sheet. The lock-up of over £700,000 in the Baker Street and Waterloo Railway, which was to have produced the company £500,000 several months ago, appears to be in precisely the same condition as when the collapse took place, except that the contractors have themselves been carrying on the work of construction. And this is the most encouraging thing that the liquidators have to say about this lock-up: "Whether or not a sale is effected as a result of the above-mentioned negotiations, we are of opinion that the Corporation's interest in the railway will be sold sooner or later. We are satisfied that there are several parties who would be prepared to purchase, but at a price which, in the interest of both creditors and shareholders, we think ought not to be accepted because of its insufficiency." That clause in the report is worthy of Mr Whitaker Wright himself; but it is little, if at all, less vague than the references to several of the other assets, which, though nominally belonging to the Corporation, have been pledged as security for advances. It is true that the loans have been reduced by £175,000, but nothing is said as to how the reduction has been effected, or what has become of the balance of profits shown in the accounts. Apart from the reduction in the loans the principal achievement of the liquidators appears to have been in disposing of over 20,000 British America shares, or about one-fifth of the number held at the date of liquidation, at prices between 4s and 5s apiece, these shares being quoted at the present time at about 1s each. The liquidators are still hopeful of being able to pay the accepted composition of 10s in the £ in discharge of the Stock Exchange creditors claims, but as they have brought actions "against various parties for the recovery of large sums of money, arising principally out of the circumstances which brought about the default of the Corporation," and as, moreover, the Stock Exchange creditors of the British America Corporation are petitioning for the compulsory liquidation of that concern we should say that the prospect of any composition being accepted by members of the "House" is an extremely remote one.

Meanwhile the outside shareholders of the London and Globe have reason to regret that they allowed themselves to be fooled into voting for the voluntary liquidation of the Corporation. They were possibly persuaded against their better judgment by the prospect of a successful reconstruction, which was dangled before them, a prospect which is certainly not made more hopeful by the report of Messrs Cloutte and Ford. By a curious

coincidence that report was published on the same morning as that on which the meeting of the British America shareholders was held; but despite the unsatisfactory character of the London and Globe document, the shareholders in the other unfortunate Whitaker Wright promoting agency, by a very large majority, voted for the same kind of liquidation as that of the parent undertaking, although Mr Whitaker Wright had stated that he intended to support the petition for official liquidation, greatly, of course, to the regret of his colleagues. Apparently, however, Mr Whitaker Wright became converted to the view of the board, for his vote was certainly not cast against the resolution for voluntary liquidation, and his large and varied following is credited with having gone solidly on the London and Globe lines. The matter has yet to be decided by the Courts, and that decision may be affected by the attitude of the creditors on the one hand and by the composition of the shareholders' vote in favour of voluntary liquidation on the other hand. In any case, it seems to us that the independent investors who have been the victims of the financial methods of the group would be very foolish in allowing themselves to imagine that a really successful reconstruction of either concern is probable or even possible. Good credit is an essential to the *bona-fide* profitable operations of such enterprises as the London and Globe and British America Corporation, more especially when, as in these cases, the directors have fallen foul of the Stock Exchange, and can consequently look for neither sympathy nor assistance from that quarter; but whatever credit the two companies ever possessed has been shattered beyond redemption by the events of the past few months. It would be utter folly, therefore, for the shareholders to provide more money to be frittered away or lost in gambling transactions, for the only hope there is of getting something out of the wreckage is that there may be a sufficiency of realisable assets to liquidate the indebtedness of the two companies and to provide the means for nursing those of the securities which are likely to become healthier by the process. The illusion that the London and Globe, British America, and Standard Exploration Companies could by any conceivable process be reconstructed into sound, profit-earning institutions is about as ridiculous as to expect a cripples' home to provide a likely team of athletes.

AUSTRALASIAN LAND COMPANIES.

The circular issued this week by the Union Mortgage and Agency Company of Australasia to its debenture-holders once more directs attention to the exceptional difficulties experienced by the pastoral and land mortgage companies of Australasia during the past seven years. The circular is concerned with the raising of fresh capital for the Australian Estates and Mortgage Company—an offshoot of the Union Mortgage and Agency, which is now in course of amalgamating its parent—the means of carrying on the business being exhausted owing to the severe droughts that have prevailed. The circular states that "a succession of droughts has been experienced, culminating in one of altogether unprecedented severity, which prevailed during last year, and which to some extent still continues in parts of Queensland and New South Wales. The result of this prolonged series of droughts has been a very heavy mortality amongst sheep and cattle, and a failure of the natural increase of the flocks and herds."

There have been partial rainfalls from time to time, which have raised hopes that a general break-up of the drought was about to take place, but these have been for the most part unfulfilled. The directors of the Scottish Australian Investment Company, in their report issued last month, stated that the season in Queensland had again been unsatisfactory. In July last rain fell, which gave considerable relief to the pastoral situation, but the drought afterwards became severe, and though the company's stock passed through the ordeal without further loss of consequence, the natural increase of sheep and cattle was very much lessened.

It is well known that the number of sheep in the Australian colonies has very much fallen off during the past few years, the circular before quoted stating that the decrease in Queensland and New South Wales alone since the end of 1894 amounts to about 26½ millions. It is evident, therefore, that the companies which depend mainly on wool and mutton must have experienced great difficulty in working at a profit, whether carrying on the business directly or confining themselves to making advances on land or produce. There have been some partial set-offs, the drought not having been quite so universal in the past two years as in the previous five years, while the 1899 clip of wool was disposed of at such high prices as to greatly compensate for the deficiency in quantity. In Victoria, the excessive drought broke up some time ago, and all the recent reports agree in the belief that a general break-up is now taking place. The moment is, therefore, opportune for showing to what extent the land companies have suffered from the adverse circumstances of recent years, and, as far as may be, what is the hope of recuperation for the future. In order to do this at all adequately, it is necessary to give the record for a considerable period, and we therefore show in the following statement the dividends paid by the principal companies for the past ten years:—

Dividends per Cent. per Annum.

* Interim. † First payment.

The accounts are made up at such varying periods that it is impossible to compile a uniform statement. It will be understood that in cases where the first column is left blank no accounts have been submitted in the current year.

So far as recent years are concerned, the record is depressing, for not only have many companies paid no dividends, but a good many have had to rearrange their capital in order to write off losses, and others have more or less heavy debit balances. The latter are, however, in a few cases being reduced. Thus the Australasian Mortgage and Agency reduced its debit balance from £45,066 at March 31, 1899, to £19,348 at the same date in 1900, while, on the other hand, the Scottish Australian Investment made a further loss last year, and reports an adverse balance as at December 31st last amounting to £75,403, and the Land Mortgage Bank of Victoria at June 30th last had a balance of £60,560 on the wrong side. Side by side with the disappearance of dividends in some cases and heavy reductions in others it is remarkable to find companies lik Dalgety and Co. maintaining an 8 per cent. dividend for fourteen years in succession, while the Australian Agri-

cultural paid the highest dividend in the ten years for 1899-1900, and has increased its interim payment from 26s in February, 1899, to 30s in 1900 and 35s last February. The South Australian Company at the worst only reduced its dividend from 13 to 9 per cent., and has now got up to 11 per cent. The Trust and Agency Company, of Australasia, paid 22½ per cent. for eleven years to 1895, but has been compelled to come down gradually to 10 per cent., while the Scottish Australian Investment, which formerly paid 12½ per cent., has not only come down to nothing, but, as mentioned above, has a heavy adverse balance.

The instances spoken of, as well as others that might be selected from the table, show how great are the potentialities of the industry should favourable seasons recur, as they must recur sooner or later. It is an industry which enjoys an unlimited demand for its product, for, as our wool trade correspondent recently remarked, so great is the appetite for frozen mutton that the Australian growers, when times are normal, can afford to regard wool as a by-product. It must be said, however, that those concerned in dealing with it seem to regard it as of equal importance with the mutton, and both, of course, have their share in the prosperity or otherwise of the pastoral industries of the colonies.

The important point for the investor is the bearing of the foregoing upon the securities of the land companies as investments, and we now give a further statement showing present prices, the yield on the basis of the last dividend, and how current prices compare with the highest and lowest quotations recorded last year :—

Prices, though they have recovered a little recently, on the encouraging reports of rainfalls in different parts of the colonies, are still at a very low level, and it is unnecessary to point out how immensely the yield would be increased, as well as the capital value, should former high rates of dividend again become possible. On the other hand, although the "longest lane must have a turning," previous experience has proved how futile it is to prophesy with regard to Australian seasons. At the best, many of the companies will require a considerable period to recuperate past losses before they have profits available for distribution, while, should matters take an adverse course, the heavy liability which most of the shares carry must not be forgotten. Still, the fact remains that, in the circumstances, as set forth above, the securities at present prices offer great possibilities if carefully selected.

OUR FOREIGN TRADE.

THE Board of Trade returns for May are unsatisfactory at the first glance, as they show a diminution in the imports of £1,450,000 and in exports of £1,159,000, as compared with the corresponding month last year. As will appear from the detailed comparison which follows, however, the figures are not quite so bad as they look. In the first place, the Whitsuntide holidays fell wholly in May this year, whereas last year they were in June. Then, as regards imports the falling-off is mainly in sugar and tea, which had been rushed forward in the March quarter in order to avoid new or increased duties. On the export side the decrease is chiefly in metals, and though the shipments were certainly smaller, lower prices were largely responsible for the shrinkage in values. The lower level of prices has, in fact, affected the returns throughout.

Our imports for the month are valued at £42,426,759, as compared with £43,876,427 in May, 1900, thus showing a decrease of £1,449,668, equal to 3·3 per cent. For the five months of the current year the total value of imports has amounted to £220,821,835, against £213,749,770, the increase of £7,072,065 being equal to 3·3 per cent.

As stated, the shrinkage for the month is largely in sugar and tea, the imports of the former being 1,995,063 cwts, valued at £1,242,071, while in May last year the quantity was 3,028,228 cwts, and the value £1,772,418. This was, of course, due to anticipatory imports, which may be expected to affect future returns for some time, as the quantity of sugar imported this year amounts to 18,793,693 cwts, as compared with 13,103,380 cwts last year, the values being £10,596,320 and £7,442,855 respectively. Our imports of tea in the month are returned at 10,703,446 lbs, valued at £340,689, against 11,655,459 lbs, valued at £421,353. In this case also the total imports of the five months show a considerable increase, amounting to 101,104,234 lbs, against 96,904,976 lbs. Owing to lower prices, however, we have paid only £3,186,467 for this year's imports, as compared with £3,582,990 for the smaller quantity last year. Duty-free articles of food and drink show a falling off of only £200,000, declines of £546,345 in the value of wheat and £213,352 in maize, having been offset by increases in oats, frozen meat, and butter, which, it is interesting to note, has been supplied more extensively from our colonies, particularly New Zealand. Australia has also sent 1,749,000 cwts of wheat this year, against only 759,800 cwts last year, but India has had no surplus for export in the past two years. Raw metals show a rather heavy shrinkage in value; but, except for a large reduction in the receipts of Spanish iron ore, it is very largely due to lower prices. That is specially so with regard to lead and tin, of which larger quantities were imported, but the cost was considerably less than last year. Chemicals and oils each show small increases for the month.

Textile materials were £181,000 less in value than in the same month last year, the falling-off being almost entirely due to the lower price of wool. Of that article we imported 79,352,264 lbs last month, valued at £2,434,455, whereas the smaller quantity of 71,657,756 lbs received in May, 1900, was returned as worth £2,892,049. The comparison for the five months is similar in character, the imports of wool reaching 380,645,585 lbs, against only 347,368,067 lbs last year, while the value has fallen from £14,531,204 to £12,201,576. The figures for cotton are in marked contrast, though the price of that also has now come down quite to last year's level. For the month our imports of cotton were 1,170,731 cwts, valued at £2,951,390, as compared with 956,839 cwts, valued at

£2,477,079, the increase in quantity and value being 22·3 and 19·1 respectively. But for the five months the total imports amounted to 7,430,084 cwts, valued at £20,127,260, against £7,052,081 cwts, valued at £17,423,783, the increase in quantity being only 5·3 per cent., while in value it was 15·5 per cent. There was, last month, again a large falling-off in the value of dry hides imported, owing to the fact that last year at this time Indian cattle were being killed off because there was nothing to feed them on. A shrinkage of about £450,000 took place in the value of manufactured goods imported, mainly occurring in French silks, leather, and cotton manufactures.

The value of British products and manufactures exported in May was £23,556,712, as compared with £24,715,930 in the same month last year, the decrease of £1,159,218 being equal to 4·7 per cent. For the five months of the current year the aggregate value is returned at £116,356,024, as compared with £119,481,429 in the corresponding period last year, thus showing a falling off of £3,125,405, equal to 2·6 per cent. Re-exports for the month show an increase of £661,767, equal to 3 per cent., and for the five months an increase of £581,219, or 2·1 per cent.

The first noteworthy item in the month's exports is coal, which fell off in value by £391,000. It might be supposed that this was due to a check on shipments owing to the new coal duty, but this is not the case, the decline being entirely owing to reduced prices. The quantity sent out in the month was 4,280,950 tons, which compares with 4,170,220 tons in May last year. The increase in quantity is somewhat remarkable, since there had been a falling-off in previous months, the total quantity amounting to 17,253,924 tons, against 17,893,482 tons in the first five months of 1900. The values are £12,583,145 and £14,029,355 respectively, and the percentages of decrease are 3·6 for quantity and 13·0 per cent. in value. Yarns and textile fabrics show only a small decrease in value for the month. In cotton yarn the shrinkage amounts to only £67,000, and it occurred almost entirely in the shipments to Germany. There was a small increase in the value of cotton piece goods, indicating rather higher prices, as the quantity shipped was somewhat smaller than last year. This maintains the feature of the preceding months, a falling-off of 37,950,000 yards in quantity for the five months ended May, being accompanied by an increase of £1,128,712 in value. A marked increase appears in our shipments to Turkey, and India has taken more than last year. The reduction is principally in the quantities sent to China and Japan. Jute piece goods show an increase, having been in demand for the United States. A shrinkage occurred both in quantity and value of woollen and worsted goods, though in the latter it was of small extent. The total decline in value of textile goods was only £211,000 on a total of £8,276,000.

The principal falling off in exports occurred in metals and manufactures thereof, the total decrease amounting to £1,030,977, nearly all of it being in iron and steel. The value of our shipments of pig-iron shows a reduction of £450,000 for the month, and of £1,675,000 for the five months. It is the effect of a general shrinkage, which, however, is most marked in the case of Germany, Holland, and Belgium. There was some increase in railroad material, mainly on account of a larger demand for India. Smaller quantities of tin-plates went to Russia, Germany, France, and Australia, and there was a general reduction in cast and wrought iron and steel. The falling off in machinery was comparatively small, and would probably be accounted for by the lower prices. An increase occurred in the value of apparel and boots and shoes, mainly for South Africa and Australia, and exports of haberdashery, hats, medicines, bags and sacks, and earthenware were each somewhat higher in value than in May, 1900.

The increase in re-exports was almost entirely due to larger quantities of colonial wool for the Continent and America. The reshipments amounted to 29,549,354 lbs, valued at £1,085,711, against 11,033,766 lbs, valued at £415,787 in May last year.

RUSSIA'S FOREIGN TRADE IN 1900.

(FROM OUR OWN CORRESPONDENT.)

ST PETERSBURG, May 27.

ACCORDING to the preliminary report of the Customs Department, Russia's total trade on the European frontier, the Caucasus and Finland, in 1900, compares with previous years as follows:—

	Imports. £	Exports. £	Total Trade. £
1900	57,200,000	68,900,000	126,100,000
1899	59,400,000	60,200,000	119,600,000
1898	56,200,000	70,900,000	127,100,000
1897	50,900,000	70,400,000	121,300,000
1896	54,000,000	66,700,000	120,700,000

Our last year's imports, as compared with the year 1899, have decreased by about 4 per cent., whilst, on the contrary, our exports have increased by about 14 per cent. Our last year's total foreign trade was about the same in amount as in 1898.

The amount of our foreign trade remains very small, and does not exceed 20s 6d per head of population, which is a lower figure than in 1878. And why the trade remains so very small, is because it is hampered by the excessive import duties, which have been greatly raised since 1877.

Whilst everything is being done in order to increase our exports, all possible means are employed to lessen our imports. Russian manufactures are not only protected by the high Customs tariff, but also by higher railway tariffs on imported goods.

Our chief trade in the last two years was with the following countries:—

	Imported from—		Exported to—	
	1900.	1899.	1900.	1899.
	£	£	£	£
Germany	21,500,000	23,100,000	18,800,000	16,400,000
England.....	12,800,000	12,900,000	14,600,000	12,900,000
Netherlands	900,000	1,100,000	6,900,000	4,900,000
France	3,100,000	2,800,000	5,700,000	6,000,000
Austria-Hungary	2,700,000	3,100,000	2,600,000	2,700,000
Italy	900,000	900,000	3,700,000	2,800,000
Belgium	900,000	1,800,000	2,300,000	2,400,000
Denmark	600,000	300,000	1,800,000	1,200,000
Turkey	700,000	700,000	1,800,000	1,200,000
United States of N.A.	4,400,000	4,400,000	..	..
China	1,600,000	1,400,000	..	..
All other countries ..	7,100,000	6,900,000	10,700,000	9,700,000
Totals	57,200,000	59,400,000	68,900,000	60,200,000

Our trade with the different countries, except Germany and England, is very small, because our exports consist chiefly of food products and raw materials, which are mostly required by the two named countries. As regards France, our chief imports thence consist of silks and wine, the demand for which cannot be large in a country like Russia, where only about 13 per cent. of the total population live in towns.

Our exports consist chiefly of breadstuffs and other articles of food and drink, of living animals, raw and half-worked materials, and manufactured goods.

The exports were as follow:—

	1900. In £1,000. £	Per Cent. of Total. %	1899. In £1,000. £	Per Cent. of Total. %	1898. In £1,000. £	Per Cent. of Total. %
Breadstuffs	30,470..	44·3..	25,902..	43·1..	37,037..	52·2
Other articles of food and drink	7,652..	11·1..	5,815..	9·6..	6,304..	8·9
Animals living ..	1,790..	2·6..	1,725..	2·9..	1,685..	2·4
Raw and half-w'rked mater'ls	26,994..	39·2..	24,987..	41·5..	23,839..	33·6
Manufactures ..	1,949..	2.8..	1,735..	2·9..	2,025..	2·9
Total	68,855..	100 ..	60,164..	100 ..	70,890..	100

Our last year's exports of breadstuffs were smaller than in 1898, our exports of raw materials have risen a little. As regards our exports of manufactures, they remain as small as ever; in fact, everything in Russia, in consequence of the high protective duties, is so dear that the only thing we can export at Russian prices are breadstuffs. We cannot even export flour, as wheat flour is dearer in St Petersburg than it is in London, the duty on flour being 3s per cwt. The duty on flour was

£3 per cwt of 112 lbs until July last, and was raised to 3s, as some 500 cwts of flour had been imported in 1899.

Our imports consisted of articles of food and drink, metals, raw materials, and manufactures. The chief articles imported were tea, coffee, fish, metals and machinery, chemicals, raw cotton, &c.

The total tea imports on all frontiers for the last three years, in quantities, were as follows:—

	In English Lbs.		
	1900.	1899.	1898.
Black and green teas.....	66,378,100 ..	63,773,700 ..	61,111,000
Tea in bricks and tablets ..	50,529,800 ..	40,977,800 ..	47,045,200

The Chinese disturbances did not, as is to be seen, interfere with the Russian tea imports.

The imports of raw cotton in 1900 compare with the imports in the previous two years as follows:—

	In Cwts of 112 Lbs English.		
	1900.	1899.	1898.
American (direct imports)	1,656,800 ..	1,977,400 ..	2,281,600
Brazil	9,000 ..	13,500 ..	57,100
East Indian	16,000 ..	20,000 ..	22,300
Egyptian	380,000 ..	603,500 ..	1,102,600
All other cotton except Persian	934,200 ..	382,300 ..	158,000
Asiatic-Persian	322,300 ..	301,300 ..	275,500
Total	3,318,300 ..	3,298,000 ..	3,897,100

The decrease in the cotton imports is due to the greater yield of cotton in Transcaucasia and chiefly in Turkestan, Buchara, China, &c. The duty on cotton was raised in July last from 3 roubles 15 copecs per pood (20s per cwt) to 4 roubles 15 copecs (26s 7d per cwt), except the duty on Persian cotton, which remains 20 roubles 25 copecs per pood (1s 4d-1s 5d per cwt) or 5 per cent. *ad valorem*.

The increase in the cotton duty was, of course, followed by a rise in the cotton prices in Russia, and, as all sorts of cotton rose in price, the price of Persian cotton went up accordingly, which was a good thing for the Persians, who are being protected by the Russian Government.

The cotton imports from Persia amounted only to 250,645 cwts in 1896, 262,581 cwts in 1897, but in 1900 they rose to 322,300 cwts, an increase of 28 per cent. in five years. There is no doubt that the imports of Persian cotton will go on increasing, as the Persians get a premium on their cotton in Russia.

It may be of interest to mention here that the duty collected in 1900 on all frontiers amounted to £20,885,300, as against £22,761,600 in 1899, and £22,894,000 in 1898.

As long as our Customs tariff remains as high as it is at present, our imports, as well as our exports, will remain small. It is quite a wrong idea to believe that a country can export without importing.

BUSINESS NOTES.

Wages Settlement in the Scotch Coal Trade.—By the award of Lord James of Hereford a settlement has been effected of the wages dispute in the Scotch coal trade. On April 30th last expired the term for which the wage had been arranged by the Conciliation Board at 7s per day, which was 1s per day under the maximum fixed in August last. Before the end of April the Associated Coalowners intimated that they intended to make a reduction of 1s per day after May 1st, this reduction being equal to 25 per cent. on the 1888 basis, which is taken as the standard for measurement. A meeting of the Board was called, at which the delegates of the men showed cause why they thought the reduction should not be made. Then there was an adjournment for consultation with constituents, during which the export coal duty was sprung upon the trade. In the excitement this caused the wage question was allowed to slumber, but some two or three weeks ago it was again taken up by the Conciliation Board. As the delegates on the board could not agree, and as the chairman is a coalowner with no casting vote, it was decided to ask Lord James of Hereford to preside as neutral chairman, and to decide between the parties. This was, in fact, a reference to arbitration. Lord James presided at the board this week, and on Wednesday issued his verdict, which is that the coalowners are entitled to reduce wages by 12½ per cent. But Lord James makes the reduction date from this week instead of from May 1st, and he fixes the rate until July 31st. The reduction is equal to sixpence per day, and the miners will have only six weeks of it, instead of twelve weeks at the shilling reduction asked by the employers. Thus the men have got the best of the bargain, and have done infinitely better than if they had gone out on strike in resistance to any reduction. That the wage question will be again raised by the masters at the end of July is highly probable, according to present trade prospects, but peaceful working is ensured in the meantime. Therefore a full output will be made in Scotland during this and next month, with the exception of the usual stoppage for the Fair holidays in July. This means that there will probably soon be an over-supply of coal in the North, for the export demand is very slack, and now that contract requirements at the opening of the season have been fulfilled, the shipments are falling off materially. The total shipments from the Scotch ports for the year up to the end of last week were 607,265 tons under those for the corresponding portion of last year. And the home demand is less than it was last year for all purposes. A notable feature in the Scotch trade is the great falling-off in the demand for small coals of all kinds, which form about 35 per cent. of the Scotch output. This is a signal mark of industrial inactivity at home and abroad. The operation of the export duty is more severe on Scotland than on the other coal producing districts, but it is almost impossible to measure its actual effect, because so much of the decline in exports is due to the industrial depression in Germany and Russia. The imports into Hamburg, for instance, last month from the United Kingdom were only 267,730 tons as compared with 288,980 tons in May, 1900, and the deliveries there from Westphalia were 140,199 tons as compared with 146,974 tons. The position simply is that if there is not a very marked improvement in the foreign demand this month (which is improbable) there will be such a large surplus of coal to be marketed at home that prices must sink under it. And this applies not to Scotland only.

The Rehabilitation of Australian Banks.—It has been pointed out to us from Australia that in the articles under the above title, published on March 23rd and April 10th, we referred to the "three banks which survived the crisis of 1893 without having recourse to reconstruction," as if these were the only banks in Australia that did not close their doors. We should perhaps have made it clear that we were speaking of the banks with whose accounts we were dealing, and which did not of course comprise the whole of the banks in the Australasian colonies. A number both of those which did and did not reconstruct were omitted, owing to their accounts not being immediately available or for other reasons. No doubt some of the banks not included in our statement and which did not reconstruct are quite local institutions, but others have business connections here and in other countries. We regret that an injustice should have been done to any of them, even if only by implication, by our remarks quoted above.

Russia and the Chinese Indemnity.—From the statement made by M. Delcassé in the French Chamber on Monday last it is evident that efforts are still being made to induce our Government and that of the United States to join in guaranteeing a new Chinese loan to provide for the indemnity payments. "We think," said M. Delcassé, "and this is not our opinion alone, that immediate payment of all claims is preferable. As China has not the necessary sum at her disposal a collective foreign guarantee will be required." This repeated suggestion of a joint guarantee is in opposition to the proposal made by our Government that each of the

Powers should take payment of its portion of the indemnity in Chinese bonds at par, and if it so desires negotiate these for itself. Very naturally, however, that is a course which does not commend itself to Russia, for whom France is now acting as financial sponsor. The recently-issued loan has only partially satisfied her requirements, but she can hardly appeal again after so short interval to French investors, and there is no other market in which a Russian loan is likely to find favour. If, however, the Chinese bonds to be handed to the Russian Government were given an international guarantee all markets would be open to them, and they could also be disposed of at much higher prices than if they bore the Russian guarantee alone. The gain to Russia for a joint guarantee is thus sufficiently obvious. But it is equally clear that it would be an act of folly on the part of our Government to pledge British credit in order that Russia might secure advantages she could not otherwise obtain.

The Tea Trade.—In their annual review of the tea trade, Messrs W. J. and H. Thompson report that the shipments from India for the season 1900-1—that is for the twelve months ended May 31st—amounted to 189,500,000 lbs, as compared with 175,000,000 lbs in 1899-1900, and 157,200,000 lbs in 1898-9. From Ceylon the quantity shipped last season was 149,000,000, as against 138,000,000 lbs in the previous year, and 119,000,000 lbs in 1898-9. Of the increase in the shipments both from India and Ceylon, the great bulk was consigned to the United Kingdom and Australasia, there being very little expansion in any other direction. On the other hand, while the exports from China amounted to 124,000,000 lbs, as compared with 115,600,000 lbs in 1899-1900, there was a decrease of nearly 8,000,000 lbs in the quantity shipped to the United Kingdom. Thus, outside the United Kingdom Chinese tea is making more headway than that of India or Ceylon. With regard to prices the record for the past three years is given thus :—

INDIAN CROPS.

	Quantity of Crop. Lbs.	Average Price per lb at London Sales. d.	Gross Value. £
1900-1	189,500,000	7¼	5,725,000
1889-1900	175,000,000	8¼	6,016,000
1898-9	157,210,000	8⅞	5,732,000

CEYLON CROPS.

	Quantity of Crop. Lbs.	Average Price per lb at London Sales. d.	Gross Value. £
1900-1	149,000,000	6¾	4,272,000
1899-1900	138,000,000	7⅜	4,385,000
1898-9	119,000,000	8⅛	4,030,000

Commenting upon these figures, Messrs Thompson point out that they "show the great producing powers of Indian and Ceylon plantations, unlooked for vitality in China's export trade, a larger volume of business than ever before, but a decline in the average value of our product so considerable as to seriously affect the welfare of everyone connected with the industry." As to the fall in prices, they express the opinion that it is due to the fact that "production has outstripped the requirements of home and foreign markets, and a limit has been found for the present to the quantity that can be taken at prices that will pay the producer." And the remedies they suggest for this condition of affairs are an improvement of the quality and a restriction of the quantity of the output of India and Ceylon, the consolidation of producing interests and the development of new markets.

British v. American Locomotives.—The correspondence that has been published between Lord George Hamilton and Sir A. Hickman with regard to the purchase of American locomotives by certain Indian railways leaves the principal question involved still in doubt. Sir A. Hickman had asserted that these locomotives had proved inferior to English engines, and in contradiction to this Lord George Hamilton wrote expressing his willingness to give all available reports, and stating that "the earlier reports [respecting the working of the American engines] were unfavourable, but when their working was better understood and alterations were made to suit the local fuel, a marked improvement was noticed, so much so that one company wishes to have more engines of a similar construction." This statement, however, is in its turn traversed by Sir A. Hickman, who asserts that later reports from the officials of the Burma Railway have been purposely withheld, and affirms that these reports show that the American engines burn 35·5 per cent. more coal per train mile and 23·5 per cent. more per vehicle mile than the British. There the matter stands for the present, but it certainly ought not to be allowed to rest there, and it is to be hoped that Lord George Hamilton will implement his promise, and publish the hitherto undisclosed report to which Sir A. Hickman refers. Meanwhile, it may be recalled that in its last report the Egyptian Railway Board, while speaking well of a number of light waggons that had been obtained from the States, stated that, in the important matter of coal consumption, the English locomotives employed on their lines were superior to the American. And in the *Daily Mail* of yesterday, Sir Ernest Paget, the chairman, and Mr Samuel W. Johnson, the superintendent of the locomotive department of the Midland Railway, are quoted as having told a representative of that paper that, as the outcome of a six months' test between the goods engines they obtained from America and those of the standard Midland type built in Glasgow and Leeds, the result was conclusively in favour of the latter. That result, we are told, was briefly as follows :—

EXTRA WORKING COST OF AMERICAN OVER ENGLISH ENGINE.

Fuel	20¼ per cent.
Oil	50 per cent.
Repairs	60 per cent.

The original cost of the American engines was about £400 each less than that of the English, but in reply to a question by the representative of the *Daily Mail* as to how far the £400 saved at the outset would go in the extra coal, oil, and repairs required, Mr Johnson is reported to have answered, "It would not take long to run away with the £400 in these ways."

Proposed Free Port at Calais.—In their newly issued monthly circular the British Chamber of Commerce in Paris call attention to a statement which appeared in a recent report from His Majesty's Consul at Calais, to the effect that as the French Government appear favourably inclined to the creation of "free ports" the Calais Municipality and Chamber of Commerce are considering the desirability of applying for such a decree in favour of their town. Should this be obtained and adopted, it is pointed out, it will mean the establishment on the waste grounds near the quays of "free zones," denationalised from a Customs point of view, within which any merchandise could be manipulated or transformed, previous to either entering the country in a marketable or refined state, or being re-exported. These free zones would have a Government right of existence for a period of at least 20 years. Among products which might be attracted to such a free port are cotton, wool, coffee, rice, and generally any goods which have to undergo an initial process of cleansing or manipulation before finding their way to manufactories or merchants' warehouses, as such a scheme would offer great economic advantages to those wholesale importers who are at present taxed by the Customs on the gross weight or volume of their imports.

Wills and Bequests.—The *Illustrated London News* gives the following list of wills proved, with the amount of personalty in each case :—

	£
Mr George Murray Smith, late of 40 Park lane	761,965
Mr Rowland Smith, J.P.D.L., late of Duffield Hall, Derby	603,437
Mr William Montague Calcraft, late of Rempstone, Corfe Castle	152,504
Mr Alexander Bramwell Bremner, late of 13 Lewis crescent, Brighton	86,538
Major George Nathaniel Micklethait, late of 7 Royal crescent, Bath	80,280

Mr John Butterworth, J.P., late of Oak Bank, Burnley ..	52,244
Arthur Saunders William Charles Fox Gore, fifth Earl of Arran, late of 16 Hertford street	44,608
Sir John Stainer, Mus. Doc., late of 10 South Parks road, Oxford	34,744

Foreign Correspondence.

FRANCE.

(FROM OUR OWN CORRESPONDENT.)

PARIS, June 6

The returns of the Bank of France for this week, last week, and the corresponding week of last year are as follows:—

BANK OF FRANCE RATES.

	%
Discount	3
Advances on bullion	1
Advances on public securities	3½

The above return, compared with that for the preceding week, exhibits the following changes:—

INCREASE.	Francs.
Cash.....	3,199,034
DECREASE.	**Francs**
Circulation	12,066,910
Treasury account	36,994,984
Private deposits	204,607,897
Discounts	229,279,483
Advances on securities.....	55,877,145

The large diminution in the discounts and advances on securities is due to the further liquidation of the displacements of money for the recent issue of the Russian loan. Private discount is now down to 2 per cent., or 1 per cent. below the Bank rate. The banks are encumbered with money seeking employment. The demand for bills on London keeps the exchange up to 25f 19c. The Bank is still paying out gold freely, and its stock has decreased £90,155 on the week. A sum of £800,000 is expected to-morrow from the United States.

The cash to-day and last week was made up as under:—

	June 6.			May 30.		
	Francs.		£	Francs.		£
Gold ..	2,457,883,985	=	98,315,359	2,460,137,866	=	98,405,515
Silver..	1,117,738,957	=	44,709,558	1,112,286,042	=	44,491,441
	3,575,622,942	=	143,024,917	3,572,423,908	=	142,896,956

The following were to-day's closing prices and the variations on the week:—

The following were to-day's closing prices, with the variations on the week, in stocks and shares not comprised in the table above:—Brazilian Fours 69f, — 70c; Spanish Exterior 71f 60c, + 1f 37½c; Portuguese Threes 26f 2½c, — 42½c; Russian Old Threes 85f 20c, — 10c; Chinese Fours 101f 27½c, + 27½c; Ottoman Bank 552f; Meridional of Italy Rails 698f, + 8f; North of Spain shares 185f, — 2f; bonds 290f, + 2f; Saragossa shares 263f, — 7f; bonds 355f, + 3f; Tharsis shares 177f, — 3f; Cape Copper 145f 50c, — 2c; De Beers 834f, + 2f 50c; Chartered Company 85f, + 75c; Consolidated Goldfields 198f 50c, + 50c; Ferreira 536f 50c, + 50c; Geldenhuis 168f 50c, — 2f 50c; Geldenhuis Deep 269f 50c, — 50c; Transvaal Land 88f 75c, — 1f 25c; Buffelsdoorn 19f 50c, — 1f; Randfontein Estates 81f; Robinson Mines 243f, — 1f 50c; Oceana 53f 50c, — 75c; Simmer and Jack 162f, — 50c; East Rand Proprietary 194f 50c, — 1f 50c; Durban Roodepoort 101f; Rand Mines 1,074f, + 2f; Lancaster 68f 25c, — 25c; Village Main Reef 223f, + 1f; May Consolidated 115f 50c, — 1f; Robinson Bank 86f, — 2f.

Prices were generally made up against buyers at the monthly account. French Threes showed a loss of 35c compared with the end of April; Three-and-a-Halfs, 50c; Lyons Rails, 77f; Northern, 25f; Orleans, 35f. Crédit Foncier shares had gained 15f from buying to obtain an allotment of the new shares. The variations in mining shares on the month were irregular. Cape Copper had risen 2f; Montecatine Copper, 4f; Ferreira, 14f; Geldenhuis Deep, 15f; May Consolidated, 7f; Robinson, 4f; Robinson Deep, 13f; Wemmer, 7f. On the other hand, De Beers had lost 28f; Tharsis, 7f 5c; Mozambique, 4f; South African Trust, 4f. The differences on the month in other mines were of less importance either way. In shares with a fortnightly account, Banque de Paris had receded 5f; Crédit Lyonnais, 7f; Lombard Rails, 9f; North of Spain shares, 8f; bonds, 6f; Saragossa shares, 5f; bonds, 7f; Suez shares, 10f. Rio Tintos had gained 18f; Metropolitan Rails, 18f; Thomson Houston, 20f. Spanish Exterior had declined 1f 40c; Brazilian Fours, 1f; Egyptian Unified, 50c. Italian had improved 1f 10c.

The annual meeting of the Suez Canal Company held this week passed off harmoniously. The anti-English faction have now abandoned their opposition, and their attempts to upset the arrangement come to with representatives of English shipowners for a gradual reduction of the tolls as the traffic increased, and they allowed all the resolutions to be voted unanimously, including the re-election of the four retiring directors, among whom were Sir Charles Fremantle and Sir James Laing, and the ratification of the provisional nomination of Mr J. B. Westray to the vacant seat of the late Mr Charles J. Monk. The situation and prospects of the company were never more brilliant, the returns for the first five months of 1901 exhibiting an increase in the receipts from shipping compared with 1900 from 36,702,450f to 42,217,357f. A fact referred to in the report read showed that the prosperity of the Canal is secured by the diversity

of the elements from which its profits are derived. The year 1900 had commenced badly, and the first six months had left a deficit of four million francs on 1899, due to the short crops in India, causing a decline in the exports of wheat and oil seeds to Europe from that country, and a diversion of the rice exports from Burmah to the famine-stricken provinces of India instead of to Europe; the rise in the price of coal also coincided with a decrease in the requirements for steamers, causing a considerable reduction in the shipments of that article from Great Britain to Indian ports. The loss of freight from these four products represented 750,000 tons of cargo, 150 steamers, and a sum of four million francs in the receipts. The whole of that deficit was made up in the second half of the year from the war ships and transport of troops and stores necessitated by the war in China, which yielded to the Canal receipts to the amount of four and a-half million francs. The report remarks that from the diversity in the elements of the traffic and the ever-increasing extent of the regions open to universal trade, and drawn into the sphere of attraction of the Canal, there is little reason to fear the effects of any crisis that may occur in any particular region. The loan of 100 million francs authorised in 1885, to be raised as required for improvements in the Canal, is now nearly exhausted, and as fresh works are still required to develop the traffic by deepening and widening the Canal, the board asked for authorisation to borrow a further sum of 25 millions, the bonds to be issued as the expenditure becomes necessary. This loan will not entail any reduction in the dividends, as that of 12 millions raised in 1871 by thirty-year bonds will have been all paid off on August 1st next, and the annuity for the interest and redemption of that loan will suffice for the service of interest of the new one. The permission was, of course, granted unanimously by the meeting.

Rarely a year passes without a proposal for an income-tax, and one of the first acts of the new Budget Committee in the Chamber was to pass, by a vote of 17 to 13, with two abstentions, a resolution inviting the Minister of Finance to insert in his Estimates for 1902 the principle of an income-tax, leaving the amount of it and the mode of assessment to be afterwards settled. All that was desired for the present is to get the principle admitted. As an inducement to obtain the acceptation of the tax, the Committee promised as a compensation the suppression of two of the direct taxes, namely, that on doors and windows and the habitation tax. As the very name of an income-tax is obnoxious, some members of the Committee proposed as a substitute a statistical tax. Persons with an income of over £50 a year would be asked to send in a return of their income, but only for statistical purposes. The public, however, mistrust the intentions of the Committee, and the system has no chance of being voted by Parliament. Moreover, the Senate to-day had also to elect its Budget Committee, and the members chosen were almost unanimously opposed to an incorporation of an income-tax in the Budget for next year.

GERMANY.

(FROM OUR OWN CORRESPONDENT.)

BERLIN, June 6.

Recent attempts to make it appear that a marked improvement in the German iron trade had occurred have now entirely broken down, and for a week the reports have been almost uniformly bad. It is now freely admitted in the most optimistic quarters that the indications of an improved situation, such as the increase in orders, have been exaggerated in the Press. Whatever improvement there was is admitted to have been the natural repetition of new spring business, only this new business was this year but a faint reflection of that of former years. From the Rhine-Westphalian country it is this week announced that a renewed shrinkage of business has occurred, and the same phenomenon is reported from the Silesian district, where iron works are suffering from the ruinous prices now being offered by their West-German competitors. It is also admitted that the slackening of coal consumption in the iron trade is beginning to be felt by the coal companies, although the coal trade is, in the main, itself still in a satisfactory condition. The coke industry, after having increased its restriction of output to 20 per cent. for May, has found that even under this reduction there is an over-production of coke; and it is considered likely that the restriction will be raised.

The Pig-iron Syndicate is still trying to prevent a further decline in iron prices. Last week it voted to extend the terms for taking goods contracted for last year for this year's delivery, but upon the condition that customers pledge themselves to buy no foreign iron in the meantime. It is announced, however, that English pig-iron is now selling on the Rhine at 30s the ton below the syndicate's price. In the Siegen district it is stated that business has been far below the volume that was usually to be expected at this season. Most furnaces have been running at reduced charges, since consumers have been very slow in taking goods ordered, and stocks of iron have been accumulating. The trade in blooms and billets is in a most depressed condition, and the rolling-mills have had to agree at last to quit cutting prices. Consumers of iron, like foundries and machine-shops, complain of unsatisfactory business; and in other parts of Germany the condition of the machinery trade is described in gloomy terms. This is particularly the case at Chemnitz, where much textile machinery is manufactured. It has also been apparent for some time that business in the manufacturing branch of the electrical industry is tending toward a slower rate of production and consumption. It has just been announced, however, that one of the great electrical companies here has received orders from the city of Manchester for electric lighting machinery, from Sydney for cables, and from the Cape Colony Government for motors, the whole amounting to about £350,000. The builders of locomotives have also been encouraged with orders from the Prussian Government for 305 locomotives, costing £875,000, to be delivered early next year. A Cassel concern, too, has received a considerable order for locomotives from the Egyptian Government.

The quarterly report of the Laura Works of Silesia has been looked forward to with much interest on the bourse for some weeks, since it was felt that the financial results achieved by this great and excellently-managed company would serve as a safe barometer of the actual earning conditions now prevailing in the German iron industry. The report as published last Friday was very disappointing. The company has its own blast furnaces, and mines its own coal. The net profits for the quarter amounted to £110,786, which is £21,850 less than for the corresponding quarter of 1900. The most significant point in the report, however, is the admission that earnings from the iron department were nearly £87,500 below those of last year. Higher prices for coal, and increased production, partly counterbalanced this loss. The report gives some striking figures, showing the extent of the price-fall in iron goods since a year ago. Merchant forms of iron fell from an average of £10 the ton to £7 and £6 10s. The returns for tubing in the domestic market were £6 9s per ton less than in the first quarter of 1900. The amount of iron orders at the end of the quarter was 40 per cent. less than at the like date of 1900. The directors anticipate a further reduction of earnings.

The effect on the bourse of the publication of the Laura report has been a renewed fall in iron shares. The fall is very considerable in many cases. Laura shares lead with a fall of about twelve points since a week ago. The shares of the Dortmund Union have also suffered heavily of late, there being frequent rumours of a forthcoming loan or increase of capital; and it is certain that the company has immense sums of money locked up in its enormous stocks of iron. The Laura report, the condition of the Dortmund Union, the break-down of the Differdingen-Dannenbaum amalgamation, and all the unfavourable trade reports, as above indicated, have made the market for iron shares extremely weak. In fact, there is hardly any demand for these

shares, although many could be selected from the list which would yield considerably over 10 per cent. upon an investment at present prices, assuming that dividends remain the same as for the past three years. Coal shares, too, have suffered in sympathy with iron shares; for it is felt that the existing rate of coal consumption in the domestic market cannot be long maintained. For the second half of May shipments began to show a decline. At Hamburg arrivals in May from domestic sources fell off, while imports from England showed a remarkable increase.

Another unpleasant experience of the bourse recently has been in connection with the shares of the North-Eastern Railway of Switzerland. The plans that have been under negotiations for some time for the acquisition of the road by the Swiss Government have at last taken practical shape in a contract, which was made public last week. It had been assumed during the course of the negotiations that the Government would make a very liberal offer for the road, and the quotation was correspondingly influenced. It now turns out, however, that the Government's offer is much less than was expected, and less than what is considered the actual earning value of the road, and the price of the shares has fallen sharply in consequence. German holders of the stock feel that they have been hardly dealt with, and the Berlin stockholders have sent an energetic protest to Berne against the sale of the road at the price offered. The compensation offered for the road is 80,000,000f, in 3½ per cent. Swiss bonds, and 2,000,000f in cash, besides the balance to the credit of the profit and loss account for 1900, which amounts to 4,882,476f. The contract has not yet been ratified, but will occupy the attention of the Federal Council in December. The Swiss stockholders have accepted the Government's offer. Negotions are in progress, it is stated, for the nationalisation of other Swiss railways.

The disaster to the grain crops occupies an increasing degree of attention. The United Agricultural Council of Prussia has estimated the losses on the Prussian rye and wheat harvest at £14,337,000. The Council suggests various measures of relief for adoption by the Government; and it is stated in the semi-official Press that the Government is deliberating upon steps to be taken to prevent distress. It makes a very disagreeable impression in the Liberal Press, representing the interests of the urban population, that the Council argues for an increase of duties at a time when the scarcity of grain will necessarily increase prices to the consumer any way, and when the insufficiency of the domestic supply is so strikingly manifest.

AUSTRIA-HUNGARY.

(FROM OUR OWN CORRESPONDENT.)

VIENNA, June 4.

Last Saturday the Austrian Reichsrath unanimously approved the Railway Investments Bill, authorising the Government to emit a loan of 600 million crowns, and the Canal Bill, which at present consists of plans in theory only. The first instalment of the loan of 600 million crowns will no doubt be emitted in the course of this month, perhaps as early as next week. Negotiations are being carried on with the Rothschild Syndicate which appears willing to take 250 million crowns immediately. It is to be a 4 per cent. loan.

The fate of the most important item in the economical year of Austria and Hungary—the harvest—is about to be decided. The prospects are not very brilliant even if all the hopes of agriculturists are fully realised, that is if a lasting rainfall succeeds to the extraordinary drought and heat of the last ten days. Already the bourse has taken notice of the dangers that threaten the harvest in Austria and still more in Hungary, and yesterday the shares of all railways, of steamship companies, and even of nearly all the banks fell very considerably. When late in the day there were telegrams announcing thunderstorms in several parts of Bohemia and Hungary, they caused more satisfaction than alarm, because it was assumed that if there was damage in some parts, the prospects of the harvest in general must have improved if the weather had at all changed. The present state of the crops is normal in Austria—but if the heat continues the corn crops, especially wheat and rye, will ripen without having grown to anything like their full size. Maize had to be planted twice in most parts, and is now in a satisfactory condition, but in great need of rain. In Hungary matters are much more serious. Harvesting should begin in four weeks' time, and there is no saying at present whether it will be a middling or a poor harvest. All hopes of a rich harvest have been given up, and this has recurred so many times in late years that the question must be seriously considered whether the average productiveness of land in Hungary should not be put down at a lower figure than is at present customary. In the northern districts of Hungary the prospects of wheat and rye are good, and in some districts in the South-West also, but in the great wheat-growing provinces, Banat, Bacska, and the Theiss country, matters are not so satisfactory. There is, as usual, a great difference between the well cultivated fields of great proprietors and the poorly cultivated fields of small farmers and peasants. The latter in Hungary hold up the plough to economise the working power of their horses, and their ploughing seldom goes deeper than two inches. Where these are concerned the heat has already destroyed all hopes of even a middling harvest. Experienced agriculturists are attempting to estimate the result of the forthcoming harvest even under such difficult circumstances, and they suppose that if the weather is favourable the yoch (1·4 acre) may yield from 6 to 6½ metrical cwt of wheat—this would amount to 35 or 36 million metrical cwts for the whole wheat harvest of Hungary. Maize has had to be planted a second time as in Austria. Oats do not promise well, and barley is very backward for want of moisture.

The Austrian Board of Trade has just published the definitive figures of the foreign commerce of Austria-Hungary during 1900. They show that the total exports during that year were worth 2,061 million crowns, the total imports 1,749 million crowns, the excess of exports over imports being 312½ million crowns, against 293 millions in 1899. The most important items in the imports were colonial goods (55 million crowns), tobacco (55½ million crowns), corn, flour, rice (49·9 million crowns), animal products (112·3 million crowns), coal and coke (112 million crowns), cotton (144 million crowns), wool (88 million crowns), silk (74 million crowns), leather (45 million crowns), literary and art products (50 million crowns). Amongst the exports the highest figures are found with sugar (186½ million crowns), corn, flour, cereals (139 million crowns), cattle (119 million crowns), animal products (167½ million crowns), alcoholic drinks (38½ million crowns), wool, yarn, and textiles (68 million crowns), timber (254 million crowns), coal and coke (95 million crowns), leather (59 million crowns), wooden and bone articles (49 million crowns), glass ware (52 million crowns). The largest proportion of Austria-Hungary's exports went to the neighbouring German Empire, 941·7 million crowns; the value of goods exported to Great Britain was 201·2 million crowns, and 45·6 million crowns besides to British India. Of the imports 635 million crowns came from the German Empire, 148·9 million crowns from Great Britain, and 84 million crowns from British India.

The Hungarian Government continues its strenuous efforts to provide Hungary with an extensive industry that would not only make it independent of foreign countries, but enable it to compete with these in providing the Balkan Countries with many necessaries of life. A great number of industrial establishments are being founded in all parts of the country at the present moment, and all have the support of the Government. At first sight all these efforts look praiseworthy, but those who are well acquainted with the conditions of agriculture in Hungary cannot but disapprove of them. The Government's wish to educate an industrial population makes it grant favours to such farm labourers as promise to work in factories. In Hungary, which is and always should be an

agricultural country in the first place, the farm labourer is getting scarce, and the artificial extension of industry will make matters much worse. Hungary can take a prominent place among nations as a corn-growing country, and if it devoted its energies to cultivate the land rationally, and increased its produce, it might very well afford to buy the manufactured goods it requires from nations with old-established industries and industrial populations such as the Hungarians will never become. A new and undeveloped industry will of necessity lead Hungary into the paths of protectionism, which are out of all harmony with the liberal notions on which this State is founded since it has made itself almost entirely independent of Austria. The Hungarians' ambition to be like the English should be extended to Free Trade.

Correspondence.

THE INDIAN TEA INDUSTRY—COOLIES' WAGES AND COST OF LIVING.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I see an article in your paper which contains such a gross misstatement of affairs that I cannot allow it to pass unchallenged. You state the cost of living has increased so much that that justifies a rise of wages. Now, if you had stated that it had fallen you would have been giving expression to what is the case. Rice has to be supplied to the contract coolie at the statutory rate of Rs.3 per maund of 80 lbs, and in the seventies there was not a single estate in Assam but had the requisite rice godown for the supply of this. Nowadays, there is not a single rice godown in the Surma Valley (one-half of Assam), simply because the coolie can buy his supplies more cheaply without the aid of the estate he lives upon, and rice-godowns are things of antiquity. It is also notorious that piece goods of all kinds have fallen so low in price as to yield little or any profit to importers, and the result is that the coolie or coolin can get either the "dhotie" or "surrie" at one-half its cost fifteen to twenty years ago, the common article now being procurable at 12 annas instead of two rupees.

I take these two articles as representing the largest items of expenditure in a coolie's monthly or yearly expenditure as affording convincing proof that I am quite right in saying that living in India, as far as a coolie goes, has gone down 30 to 40 per cent. in the last twenty years.—Apologising for taking up so much of your space, I have the honour to be, Sir, your obedient servant,

JAMES PETER.

1896	152,806,791

NEW CAPITAL ISSUES.

Borough of Durban (Natal).—Tenders for the issue of £250,000 4 per cent. stock were opened on the 5th inst., at the Standard Bank of South Africa. The total amount applied for was £606,600, at prices ranging from 105 to the minimum (par). Tenders at £100 5s will receive about 6 per cent., and those above that figure will receive allotment in full. The average price obtained for the loan of £250,000 was 101.

Portsmouth Corporation.—The National Provincial Bank of England, Limited, is authorised by the Corporation of the Borough of Portsmouth to receive applications for an amount of stock sufficient to realise the sum of £556,711, in addition to the expenses incidental to the issue. The stock will be issued at the price of £95 per cent., free from stamp duty or other charge. It is pointed out that the discount of 3½ per cent., which is allowed for prepayment in full, practically reduces the price to allottees to 94½. The prospectus states the rateable value of property within the borough has been more than doubled within the last twenty-three years (the increase arising partly from the rapid growth of Southsea as a watering place), and now amounts to upwards of £806,600. The entire debt of the Corporation, inclusive of the present issue, will amount to £1,832,534, of which £161,033 was raised for School Board purposes. The present issue is required for the purchase of the borough tramways. The list of applications closes on or before Monday next, June 10th.

City of Bergen.—Messrs C. J. Hambro and Son offer for subscription the bonds of a 4 per cent. loan for £330,500 sterling, secured on the revenues of the City of Bergen, Norway. The prospectus states that the population of the city is about 72,000, and gives particulars of the existing debt, the expenditure, income, and rateable value. The bonds are offered at 98½ per cent., and subscriptions will be received up to four o'clock on Thursday, June 13th.

Ecuadorian Association, Limited.—This association, which, in April last, offered for subscription 50,000 £1 shares, the balance of its capital of £500,000, now comes forward with an offer of £1,000,000 6 per cent. debentures at the price of 90 per cent. The security consists of bonds and stock of the Guayaquil and Quito Railway, and it is stated that the railway gold bonds are secured by first mortgage on the railway, and are guaranteed, both as regards principal and interest, by the Government of Ecuador. This guarantee is secured by a lien upon all the Custom-house duties of the Government of Ecuador, which duties, during the year 1899, amounted to 6,184,623 sucres (equivalent to £618,462), and during the year 1900 to 7,287,000 sucres (equivalent to £728,700). The mortgage on the railway is vested in the United States Mortgage and Trust Company of New York as trustee for the bondholders. The arrangements are very complicated, and are subject to no less than 36 contracts scheduled in the prospectus. The prospectus requires careful study on the part of investors to enable them to determine whether the high rate of interest offered (£6 13s 4d per cent.) fairly covers the risks.

MEETINGS, &c.

METROPOLITAN DISTRICT RAILWAY COMPANY.

A special general meeting of the shareholders in the Metropolitan District Railway was held on the 6th inst., at the Westminster Palace Hotel, London, Mr J. S. Forbes (the president) presiding, to consider the Bill, with an additional provision thereto, now pending in Parliament, and an agreement therein referred to, the Bill being to empower the company "to provide for the conversion and adaptation of their railway for being worked by electric traction," and the agreement being one between the company and the Metropolitan District Electric Traction Company, Limited.

The secretary (Mr William Jones) having read the notice convening the meeting,

The Chairman observed that they need not harp too much on the company's misfortunes, over which they had mourned for some years. The electrification of the railways was said to be the remedy for the evils under which they were suffering; but with their credit how were they to make the change? The directors determined some time since, in view of the importance and the gravity of the position, to take the bull by the horns and by some means to raise enough money to do what they sincerely believed ought to be done, which, if done, would probably retrieve the position of the company. They acted at that time on the principle that that it was indispensable to the future of the undertaking that the money should be obtained in order to enable them to adopt electric traction; and it therefore seemed that everyone interested in the concern was to be benefited, sooner or later, by the expenditure of the money for this purpose. The debenture holders, however, did not like having capital placed over their heads, nor did the preference shareholders desire their position to

be altered by reducing their interest; but the ordinary stockholder, who was the master of the position, had to be conciliated. In the result it had been determined to abandon the financial proposals as formerly submitted to the proprietors, and the position of the debenture and preference stockholders was not to be altered. The Bill, however, had to be presented for confirmation in its original form, and this involved the process called "additional provision," which meant that Parliament would be asked to waive the provisions of the measure as it was at first introduced, and to allow the company to make the changes that had since been decided on. He had no doubt that the Parliamentary Committee would consent to the abandonment of the clauses which it had been decided to strike out of the Bill, and that they would adopt the amended proposals by the petition for additional provision. The directors had remodelled the Bill in the additional provision. The matter was now all centred in the agreement between the railway company and the traction company, and on the part of the directors he advised the proprietors to confirm the proposed arrangements as a solution of the difficulties of the company. The parties referred to, having acquired the large holding of stock mentioned, were so confident in their power to raise that capital out of the mud into something good that they would find the other money that was necessary. That was the essence of the agreement, and the agreement was the *crux* of the question. It had been the subject of mature deliberation; it divided itself into two parts, one being the generating station and the other the conversion of the railway "from its present desolate waste of darkness into a brilliant galaxy of light." The generating station they proposed to provide under one contract. It was to be erected by the parties in question, who would select firms to do particular kinds of the work, the object being to carry out the whole at the lowest cost, and the railway company were to have a voice in determining what was cost price. These gentlemen would not make any profit at all out of the generating station, which, on the completion of the works, would be hired to the railway company. The contract for the electrification and equipment for working the line by electric power differed from that in relation to the generating station. Mr Yerkes's combination would take for that purpose all that the company had to give, and what they had to give was embodied in what the proprietors authorised the directors to do at a previous meeting. They had power to raise £500,000 of ordinary stock, which carried with it the power of creating £166,000 of 4 per cent. debenture stock. They had agreed to take the £500,000 ordinary stock at the nominal price of 25 per cent. and the £166,000 of debenture stock at par, and in virtue of that surrender they would take upon themselves the obligation of the conversion of the line. They undertook to carry out the change without any interference with the working of the traffic—an astonishing assertion of confidence. The parties who had agreed to do all this got very little out of the specific sums, and it appeared to him that their chief chance lay in the improvement of the value of their large venture in the ordinary stock. What they secured to themselves was a reasonable interest on the outlay; they were to find the money for the generating station and any other capital that might be necessary at 5 per cent. There was to be a 5 per cent. charge in the nature of a rental on the generating station, and 5 per cent. on any money required over and above the £500,000 ordinary stock and £166,000 debenture stock referred to. The directors had had many discussions on the matter, and they had not been always agreed; but they had at length come to the conclusion that they could conscientiously put the proposals in question before the proprietors as the best possible solution of the difficulties of the concern. The board had enough proxies to carry anything, but what they wanted to see was the resolution agreed to unanimously by the proprietors present. In conclusion, he moved resolutions approving the Bill and the agreement with the Metropolitan District Electric Traction Company, Limited.

Major L. H. Isaacs seconded the resolution.

Mr Walford said he considered that the board had adopted the right course, and he thought it was quite possible that, with the proposed changes carried out, the position of the company might be retrieved in a few years.

Colonel John Morris asked what benefit would be derived by the change to electric traction. He thought that the fares would have to be further reduced. They would, he believed, have one of the finest electric railways in the world, and instead of being 90 feet below the ground, it would be almost on the surface.

Mr Robertson said that he had always placed the greatest trust in the chairman's knowledge of these matters; but he had not gathered from what had been said that the chairman had a very great idea that what was suggested was going to be a success, or that if it was the present shareholders would derive benefit from it. The chairman, however, had rightly said that it was impossible for shareholders at such a gathering to form a correct judgment of what was proposed, but he (the speaker) saw some difficulty in passing a resolution binding the company to enter into an agreement, provisional or otherwise, with a syndicate or company not yet formed. He thought that they ought to know more about the agreement before voting, unless they felt that they could simply rely on the directors doing their best in the proprietor's interests.

Mr Perks, M.P., said he thought that the chairman had made the position quite clear. He himself had not a penny of interest, professional or other, in the new company which was to undertake the arrangements for the electrification of the railway. The arrangements between the Traction Company and the railway company provided for the absolute subscription of one million sterling by responsible people before the agreement was exchanged; and already that company had its memorandum and articles of association signed by at least 16 names, including some of the wealthiest firms in America. It is not, however, wholly an American group, some well-known Englishmen being connected with the enterprise. He desired to emphasise the fact that the Traction Company would not make a penny of profit on the erection of the power-house or on the supply of the materials for the elecrification of the railway. Those who were supplying the money which was required to carry out the proposed changed looked to the future increment in the value of their stock for their remuneration.

Other shareholders having addressed the meeting,

The Chairman, in reply, stated that the directors were assured that £400,000 was a liberal estimate for the cost of the generating station, which would be hired by this company on the basis of 5 per cent. on the outlay. It would be impossible to submit proposals involving all sorts of legal, Parliamentary, and other difficulties to each individual proprietor for his approval or correction. The conduct of such affairs as these must be a question of confidence in the people employed. The agreement could only become binding on the proprietors when the Traction Company was formed; but, when that company was organised and formed, this company's Bill, if the meeting now approved it, would be on its way through Parliament. By the conversion of the line to electric traction, according to what he had been told, more trains could be run, and at a much less average cost per train mile than at present. The District Company now spent 52 per cent. of their receipts in expenses, whereas it was said that electric lines could be worked at 35 per cent. The difference between those two rates would represent £70,000 to this company. There would be an enormous saving, however, if the working expenes were 40, or even 45, per cent; and, in addition, there was the multiplication of trains. It had always been the wish of his colleagues and himself to live in perfect friendship with the Metropolitan Company. They could not, however, sacrifice their interests in this matter to that company. The character of the two undertakings had so entirely changed in the last few years that he could not himself see that an amalgamation between them could be possible. He was addressing the proprietors that day on a more important matter than had ever previously been put before them during the 30 years in which he had been connected with the company, and he appealed to them to give the directors their confidence, as they had always hitherto done.

The motion was then submitted to the meeting and carried unanimously.

An extraordinary general meeting was afterwards held at which resolutions were unanimously passed authorising the company to subscribe for any sum not exceeding £200,000 which the directors might think fit towards the capital of the Brompton and Piccadilly circus Railway Company, and empowering the directors to exercise all or any of the powers conferred by Section 23 of the Whitechapel and Bow Railway Act, 1900.

A vote of thanks to the chairman terminated the proceedings.

QUEBEC CENTRAL RAILWAY COMPANY.

The annual general meeting of the shareholders and bondholders of the Quebec Central Railway Company was held on the 5th instant at the offices, 5 Great Winchester street, London, Mr Edward Dent (the president) presiding.

The secretary (Mr T. Lindley) having read the notice convening the meeting,

The Chairman stated that the gross earnings for 1900 were $537,995, or an increase of $35,586 as compared with those for 1899; the working expenses were $368,544, an advance of $34,306; and the net revenue was $170,228, being an increase of $1,280. The percentage of working expenses to gross earnings was 68·50, as against 66·52. After providing $81,234 for the year's interest paid and accrued on the outstanding prior lien bonds and debenture stock issued, there remained a net revenue balance of $88,994, which was increased by the amount brought forward to $113,760. Out of this 2¼ per cent. was paid on the income bonds on the 1st ult., and $20,991 was charged for damage caused by accidents, leaving a balance of $18,657 to be carried forward. The increase in gross receipts was owing to the progressive tendency shown in all classes of traffic carried by the company. The passenger traffic showed an excess of $12,787, while the earnings from freight were $23,319 more than in 1899. Owing to the abnormal rise in the prices of every material used on railways, together with advances in the wages of the company's *employés*, the excess in the gross earnings was almost all absorbed, but the increase in expenditure was of such a nature that it could not be avoided, and all other railways had suffered in the same way. All classes of business throughout the district served by the company were prosperous last year. The different manufacturing and mining industries were worked to their fullest capacities. Many of the old asbestos mines which had been closed were reopened. Shipments of farm produce increased, as well as those of pulpwood for the pulp and paper mills in the United States. The track had been kept in good condition. The new bridge at St Anselme had been constructed 10 feet higher above water, and was 25 feet longer in span than the bridge which was carried away by floods early last year, and it had stood well, undamaged by the serious floods that occurred early this year. At the end of the directors' report were copies of two Acts which had been passed by the Legislature of the Province of Quebec. The second would be dealt with at the special meeting of income bondholders. The first gave the board power to construct a branch from Scott's Junction to the proposed new bridge which it was expected would be built across the St Lawrence River, about five miles above Quebec. It was not anticipated that the bridge would be finished for three or four years, but it would probably be expedient for the company to have direct connection with it, thus enabling trains to run through from Sherbrooke to Quebec, and obviating the necessity, as at present, of changing at Levis and crossing by

ferry to Quebec. The line would be about 20 miles in length, and Mr Frank Grundy (the general manager) thought it would, by the development of local traffic, pay of itself, independently of the bridge connection. In conclusion, he moved the adoption of the report and accounts.

Mr Grundy seconded the motion, which was unanimously adopted; and resolutions were also passed re-electing the retiring directors for the ensuing year, and authorising the board, for the purpose of prosecuting and completing the branch railway mentioned, to issue mortgage bonds or debentures or debenture stock for an amount not exceeding $20,000 per mile, "to bear such rate of interest, and to be perpetual or redeemable or repayable at such dates and in such manner, and to be issued at such price and at such times," as the directors might determine.

A special general meeting was afterwards held, at which resolutions were submitted authorising each existing £100 income bond to be exchanged for £50 3 per cent. second debenture stock (with interest contingent on the net profits of each year after paying prior charges, and payable half-yearly, on January 15th and July 15th, the first payment to be made on January 15th next) and £50 new income bond entitled to interest not exceeding 7 per cent. per annum, payable annually, as soon as the available surplus net revenue of the year was ascertained, the second debenture stock to have priority over the new income bonds, both as regarded principal and interest.

After some discussion, the resolutions were submitted to the meeting, and declared carried by the requisite majority.

A vote of thanks to the chairman for presiding terminated the proceedings.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED.

The annual general meeting of the shareholders in Liebig's Extract of Meat Company, Limited, was held on the 6th instant at the Cannon street Hotel, London, Mr C. E. Gunther (the chairman) presiding.

The secretary having read the notice convening the meeting,

The Chairman said: Gentlemen,—As you will have seen, the final result of our last year's working has been very satisfactory, in spite of cattle being dearer than during the previous season. At the same time they were in very prime condition, and, consequently, we obtained an excellent yield from the first-class animals we are in the habit of purchasing, and also from the fine cattle which we breed on our own estancias or cattle ranches. The good yield must also be partly attributed to our machinery and method of working, both of which owing to the vast experience we have acquired during the last thirty-six years I may describe as being as perfect as possible. Our hides, tallow, and produce generally were realised at satisfactory prices. You will observe that the £5 preference shares issued last year appear for the first time in the balance-sheet. I may mention here that the 25,000 offered to the shareholders at par were very largely over-applied for, and, as nearly all the shareholders availed themselves of the offer, there were only very few surplus shares left for distribution amongst holders, who had asked for a larger number than that which they were entitled to have allotted them. Our preference shares, as you, no doubt, are aware, are now quoted at £1 premium. The money obtained by this issue was not available until about September, but we have already felt the benefit which the possession of it gives us in dealing with our business generally. In the first place, these additional funds facilitate our financial operations, enabling us, when necessary, to ship specie to the River Plate to pay for cattle, wages, &c., when we should otherwise incur losses, if exchange rates were unfavourable. During the last few months of our financial year we sent out £250,000 in sovereigns, and this fully demonstrates the advantage of having large sums of money ready at our disposal. A further great benefit we derive from our new resources is that accruing from the development of our estancias or ranches and cattle business, which gives very satisfactory results, and also helps us greatly in operating at our works, making us more independent of outside cattle dealers and, at the same time, improving the quality of our own cattle. Our stock of cattle now amounts to over 100,000 head, roaming on some 510,000 acres of the finest grazing land in the world. This will give you a slight idea of the importance of this branch of our business. I may here add that we are amongst the largest buyers and exporters of prime English bulls for continually improving the breed of our own vast herds. I only returned from the River Plate a week or two ago, gentlemen, where I had been visiting our properties, and I can assure you that I was delighted with everything I saw. The improvements which have been made since my last visit three years ago work effectively, and are very beneficial to our business. The sales of our well-known extract of beef all over the world continue to expand, notwithstanding the fact that last winter was rather mild, and this country was, fortunately, not visited by a repetition of the previous year's severe epidemic of influenza. The Government demand for the troops in South Africa and China has been unprecedented, in addition to which the public have purchased large consignments for their friends at the front. I am glad to be able to add that there are signs that our general sales are likely to be extended with the advent of that prosperity which we all hope will soon arrive with the conclusion of the South African War. The new trade mark "Lemco" is becoming well known all over the United Kingdom and the colonies, and is enabling us to get the full benefit from our advertising. Since I last had the pleasure of addressing you we have put another article on the market in the shape of our new meat beverage "Oxo." You will be aware that in the United Kingdom and the colonies there is a large demand for flavoured bouillons, and, probably, no firm in the world is so well equipped as we to cater for this branch of trade. We have our own enormous meat extract factories and cattle farms, and consequently, unlike some of our principal competitors, we are not dependent on outside contractors for the supply of our raw material. We are thus able to avoid the difficulty of manipulating meat extract of ever-varying quality, and, owing to our being able to produce the article entirely in our own factories, we can afford to sell at lower prices than others. We are gratified to be able to inform you that "Oxo" has, consequently, been very well received by the medical profession and the public; numerous public institutions and hospitals are taking advantage of the economy which can be effected by its introduction, and we have already executed orders from H.M. War Office for large quantities for shipment to South Africa. We have, therefore, every reason to hope that, in time, "Oxo" will prove a very profitable adjunct to our business. As mentioned in the report, we have lost an old and highly-valued friend by the death of Professor Dr Max von Pettenkofer, who held such a distinguished position in the scientific world, and who, for many years, was the director of our scientific department at Munich. His successor is Professor Dr Carl von Voit, Director of the Physiological Institute of the Munich University, who has also been attached to our scientific department for some years, and he will receive the co-operation of Professor Dr M. Rubner, Director of the Hygienic Institute of the Berlin University, in controlling the manufacture of our extract of meat. In addition to the services of these two eminent gentlemen, we continue to receive here the valuable advice and assistance of Sir Henry Roscoe, so you see, gentlemen, our scientific department remains as strong as ever. Mr Frederic Ingenohl having retired from the office of manager of our general depôt, Antwerp, a position he has so ably occupied for 34 years, has been succeeded by Mr Charles Muller, who has assisted in the management of our depôt for a number of years. I am pleased to be able to add that arrangements have been made by which Mr Ingenohl still gives the company, from time to time, the benefit of his long experience. In conclusion, the Chairman moved:—"That the thirty-fifth annual report, balance-sheet and profit and loss account thereto annexed, and now before the meeting, be adopted and passed."

Mr Wilhelm Mallinckrodt seconded the motion, which was carried unanimously.

The auditors (Messrs J. and J. Sawyer and Co.) having been reappointed,

A cordial vote of thanks was passed to the company's representatives in the River Plate and to the staff both in Europe and America.

A vote of thanks to the chairman and directors for their able conduct of the business during the past year terminated the proceedings.

JAMES NELSON AND SONS, LIMITED.

The annual ordinary general meeting of the shareholders in James Nelson and Sons, Limited, was held on the 4th inst. at 17 Throgmorton avenue, London, Mr William Nelson, J.P. (the chairman), presiding.

The secretary (Mr Philip Holmes) having read the notice convening the meeting, and also the report of the auditors,

The Chairman said: Gentlemen,—The balance-sheet is a very full one, and I do not think it calls for any remarks from me. It is satisfactory to see that, although we are doing a largely increased volume of business, our stocks in Great Britain and afloat are only some £3,000 more than they were the preceding year, while the debts due to the company are some £2,000 less. When I had the pleasure of meeting you a year ago I expressed the belief that the steady progress the business was making would result more or less in the very satisfactory figures we have to-day been able to place before you. The report itself touches upon the salient points of the business, but if I may add that your directors have always in mind the extension of the business in the retail department, and whenever opportunity offers they extend the same, and I myself believe by so doing, not alone do we add to the immediate profits of the company, but to a very appreciable extent safeguard it against the fluctuations that all mercantile undertakings are more or less subject to. I believe the board are unanimously of that opinion. We have found it necessary during the year to make further provision for the slaughter of cattle in South America. The quality of the beef has improved so much as to create a good and permanent demand for it here. It gives great satisfaction to our wholesale customers, and the reports that we get from our retail establishments, and through them from the consumer, I feel sure justify us in any expenditure that we have been put to to fully provide for the increasing demand for Argentine beef. All the boats we have under charter are now specially fitted for bringing over chilled beef. Some persons might say the volume of business we are doing is very rapidly increasing, but it is not increasing more rapidly than the demand for our products from the Argentine. In a business of this nature it has been proved that in doing a large trade you minimise the cost of production and distribution; in other words, practically the same engineering staff, the same amount of coal and oil works a business of the magnitude we are now doing as it heretofore took to prepare and distribute a very much smaller quantity of meat. In taking charge of the meat here the same remarks apply, both in your cold stores and your outside and inside staffs. So long as we continue to take care of the major portion of our products by selling them direct to the consumer, this company should have nothing to fear. As I said before, this is just the one thing the board always keep in view. With reference to all this increase in business, I may now say that we are practically at the end of our capital expenditure, and for the time being we have a complete plant in South America, and ample buildings, and the factory, generally speaking, may be said to be able now to turn out as much meat per annum as even the most ambitious of us would be

likely to want. With regard to the disposal of the balance of profit and loss, your directors propose a dividend at the rate of 6 per cent. on all classes of shares, 3 per cent. of which has already been distributed, and propose to transfer £40,000 from profit and loss, thereby increasing the reserve fund to £60,000. Before concluding my remarks, it again gives me great pleasure to bear testimony to the assistance rendered by the officials of the company both here and in South America to keep the company in its satisfactory condition. I now beg to move:—"That the directors' report and balance-sheet and profit and loss account to December 29, 1900, be and they are hereby approved and adopted," but before putting it to the meeting I will be happy to answer any questions shareholders may wish to put.

Mr George Harris, in seconding the motion, congratulated the shareholders on the fact that the board had been able to materially strengthen the position of the company by building up a substantial reserve, which was the safest course in the interests of the company and particularly of the ordinary shareholders.

Mr Lewis Peake considered £40,000 an excessive amount to place to the reserve fund. If the company had, as the chairman remarked, come to the end of its capital expenditure, why should it be necessary to have this excessive reserve fund? The £40,000 was sufficient to pay over 12 per cent. on the ordinary shares.

Mr P. Mosditchian said he endorsed the remarks of the previous speaker. He had no fault to find with the balance-sheet, but he thought the directors might treat the ordinary shareholders a little better.

Mr J. Anderson observed that he differed from both the previous speakers in the views they had expressed on the action of the board in limiting the dividend to 6 per cent. He thought the board had done wisely in securing, so to speak, a continuity of dividends to the ordinary shareholders. He would prefer to have a regular 6 per cent. than to have 12 per cent. one year and nothing the next. He entirely endorsed the conservative policy of the board, and he believed that the balance-sheets of the past two or three years were the best guarantees the shareholders could have that the directors were doing their best in the interesta of the company.

The Chairman said he did not agree with those gentlemen who had spoken against the reserve fund. They need not be afraid that the preference shareholders were going to encroach upon the reserve fund. The profits already for the present year were more than sufficient to meet the preference dividend, and so that idea could be dispelled. He trusted that shareholders would bear with the board, and he thought that in another year, while they would still be asked to put a certain amount to reserve, the ordinary dividend need not remain at 6 per cent. In his opinion the reserve fund should be built up.

The motion was then carried unanimously, and a resolution approving the payment of dividends at the rate of 6 per cent. per annum on the first and second preference shares and on the ordinary shares was also agreed to.

The retiring director, Mr Walter Blease, having been re-elected, and the auditors, Messrs Turquand, Youngs, and Co., reappointed,

Mr John Morris proposed a vote of thanks to the chairman and directors, and expressed the opinion that great credit was due to them for the excellent results which had been achieved during the past year.

Mr W. A. Arnold seconded the motion, which was unanimously adopted.

A vote of thanks to the staff in South America and in England terminated the proceedings.

J. LYONS AND COMPANY, LIMITED.

The annual general meeting of the shareholders in J. Lyons and Company, Limited, was held on the 6th inst., at the Trocadero Restaurant, London, Mr Joseph Lyons (the chairman) presiding.

The secretary (Mr George W. Booth) having read the notice convening the meeting,

The Chairman said that the gross profit for the year ended March 31st last amounted to £297,435. Considering that the paid-up capital of the company was only £270,000, he thought it would be agreed that, on a moderate tariff like theirs, such a result spoke volumes for the possibilities of the business. Including the sum of £8,721 brought forward, the net profit was £104,397, from which had to be deducted £4,828 for debenture interest, and, following their usual policy, the board had applied £17,595 to depreciation. Out of the balance then remaining an interim dividend at the rate of 22½ per cent. per annum had been paid, and the directors proposed for the second half of the year a final dividend at the rate of 30 per cent. per annum. This left £11,093 to be carried forward, or £2,000 more than was brought into the present accounts. About £5,000 had been expended out of revenue for repairs and renewals during the period under review, and the debenture indebtedness had been further reduced by £2,500. In the course of the past twelve months ten additional depôts had been opened, but as the majority of these were only completed late in the year the accounts now under consideration had benefited but little thereby. Besides the arrangements entered into for the acquisition of the eight depôts mentioned in the report, some of which were already being fitted up, negotiations were in progress for several others, so that he might fairly predict that the current twelve months would be their record year in the extension and development of this popular branch of the business. He was pleased to say that the Throgmorton Restaurant had satisfactorily fulfilled the expectations of the board. The Trocadero extension was being pushed forward with all possible speed, and the directors foresaw in this enlargement an increased earning power. After providing for the installation expenses at Throgmorton street and the new depôts opened during the past twelve months, there was a balance of £113,813 to add to the reserve, thus bringing up the total of the reserve fund to £346,105. In issuing the remaining 30,000 shares the board saw opportunities for the further advantageous extension of the business. As this issue would exhaust the existing capital authorised, it was proposed to pass a resolution to increase the nominal capital by £100,000. The directors considered that the time had come when the shareholders should receive some substantial benefit in a manner that would not impair the stability of the company or depreciate the continuously growing profits. It was therefore proposed to issue to shareholders, in the present and succeeding years, shares at £1 each, in the proportion of 1 to 30 held by them. A feature of the proposals of the board was the conversion of the existing debentures. With assets amounting to over £1,000,000, which would be the case when the subscription for the present issue of 30,000 shares was completed, it was ridiculous to pay 4½ per cent. per annum on so comparatively trifling an amount as £105,000—the present debenture indebtedness—and therefore the directors intended to redeem the debenture stock and bring into existence a new debenture stock for £300,000 at a lower rate of interest. This increased debenture stock was, however, more a provision for the distant future than for anything in view at the present time. The business continued to progress in all departments. In conclusion, he moved the adoption of the report, accounts, and the payment of the proposed dividend.

Mr E. Lee seconded the motion, which was carried unanimously.

The retiring directors having been re-elected, and the auditors reappointed,

An extraordinary general meeting was held, at which a resolution was passed increasing the capital by 100,000 new shares of £1 each; and it was also resolved that the board should be entitled to allot to themselves, at the issue price, any of the 30,000 new shares about to be issued which might not be subscribed for by the shareholders

The proceedings then terminated.

CRISP AND COMPANY, LIMITED.

The annual general meeting of the shareholders in Crisp and Company, Limited, was held on the 3rd inst. at the company's premises, 71 Seven Sisters road, London, Mr F. Crisp (the chairman and managing director) presiding.

The secretary (Mr G. Courtney) having read the notice convening the meeting, and also the report of the auditors,

The Chairman expressed regret that the accounts did not show a more satisfactory result, but said that while it was doubtless very disappointing to the shareholders, it was for him personally a very grave and serious matter, as he was again called on to find a large sum under his guarantee. During the past year numerous meetings had taken place between the board and the advisory committee with a view to the reorganisation of the business, to dealing with the stock-in-trade, and other matters which seemed to require a remedy. Many drastic changes had been made, and, on the whole, the business was now in a much sounder condition than it was formerly. They had appointed Mr Robert Vick as general manager, and to that gentleman's efforts in the future he looked forward with confidence. The process of reorganisation must of necessity be a slow one, and he had to ask for the shareholders' patience and forbearance until the work in hand was completed. They had all a common interest in the company, and their best chance of success lay in working together. He appealed to them, therefore, to give to the board and the advisory committee their cordial support, and not to add to the company's difficulties by unduly depreciating the property.

Mr Alfred R. Gery seconded the resolution.

Mr Ritchie thought some member of the advisory committee should state what they were proposing to do, seeing that the Chairman asked the shareholders to support them.

Mr F. Gale (a member of the advisory committee) said that the first thing which the committee did when they attempted to reorganise the business on a more satisfactory basis was to pay a visit to the establishment and thoroughly inspect the stock. The result of this inspection was on record in the minutes of their proceedings. The committee still thought there was a portion of the stock that remained to be dealt with on the lines that they indicated to the board, and they hoped their advice would be taken, and that this stock would be eliminated before the next semi-annual stock-taking in August of this year. He thought that if the general policy recommended by the advisory committee, including the strengthening of the directorate, were carried out, the balance-sheet a year hence would be very much more satisfactory than that now submitted.

Mr Cosser criticised the counting-house management, and also expressed his surprise at £670 being charged in the accounts for directors' fees, seeing that for a portion of the past year—Mr Jonas Smith having retired—there were only two directors. Directors who had made a loss of £9,000 should not, in his opinion, expect to take any fees.

Mr J. Barker (a member of the advisory committee) said the committee had done their best to get the counting-house into good working order, as they had done a great deal in connection with the business throughout. In the opinion of the committee it was necessary to further strengthen the board, and it had been a matter of great difficulty to find gentlemen who would serve as directors, especially in view of the condition of the business, but they had been fortunate enough at the eleventh hour to secure two gentlemen who he believed would be of great advantage to the company, and he hoped the shareholders would support this recommendation of the advisory committee, whose work was now at end. He desired to move that Mr W. C. Gale and Mr Hugh Davies be appointed by the directors and by the company in general meeting to be directors of the company.

Mr F. Gale seconded the motion.

In reply to questions, the Chairman said that he had confidence in the committee, but he must say that he was unaware that the election of two directors was to be proposed on that occasion. However, he had no objection, and was prepared to work with the gentlemen referred to so long as he considered that they looked after the business. He then went on to say that during the last two or three years he had had so much anxiety in connection with the business that his health was giving way, and he intended going away for three or six months' holiday.

After further discussion, Mr Barker's resolution was incorporated with the motion for the adoption of the report and accounts and the payment of the dividends recommended, which was carried unanimously.

The retiring director, Mr G. I. Harrison, having been re-elected, and the auditors, Messrs Chatteris, Nichols, and Co., re-appointed,

The proceedings then terminated.

SANTA RITA NITRATE COMPANY, LIMITED.

The annual general meeting of the shareholders in the Santa Rita Nitrate Company, Limited, was held on the 4th instant, at Winchester House, London, Mr Henry W. Lowe (the chairman), presiding.

The secretary (Mr W. J. Welch) having read the notice convening the meeting, and also the auditors' report,

The Chairman said: In submitting the report and statement of accounts accompanying it, I think I am justified in observing that it is the most satisfactory report and accounts that we have presented for many years. Our net profit is shown to be £14,165, and after providing for the debentures and the interest falling due at the end of this month we have, including the balance brought forward from last year, a total net profit of £18,106. This result, after the depressing years we have passed through, must be considered as encouraging, especially as no part of the new combination year is included in the period in which we sold our produce. Out of the profits I have named we recommend the distribution of a dividend of 5 per cent. I am fully in expectation of questions being put to me as to why the dividend should not be larger, as such a large amount of profits is shown in the accounts; but I have to call your attention, as we have done in the report, to the fact that we have now two oficinas at work, and two oficinas require almost double the capital which one requires. Our shareholders must also bear in mind that owing to the improved position of the company, the profits that we have shown and the profits we fully expect to be realised in future have reflected themselves on the price of the shares. Our shares at the time of the meeting last year were standing at 2; to-day they are over 4½, so that those shareholders who do not receive as much dividend as they would like to receive, I think, might take to heart the fact that their property has considerably appreciated in value. With regard to the prospects, I can assure you they are most excellent, and I am in a position to state to you to-day that with the profits we have made on our produce for this present current year, we shall have a sum which would enable us to distribute a dividend three times at least as great as the one we now propose, and we expect it to be even greater than that. And not only that, but you may look forward in the following years to even better results, because we could now sell our produce for the whole of next year at a considerably higher price than the average price of the current year. Our debentures are being paid off at such a rate that after this month we shall only have a sum of £17,500 outstanding, and this item can be cleared off in five years from the present time by the absorption from our profits of only a sum of £4,000 per annum. It is well to bear in mind the very low capitalisation at which this company stands. The capital is only £96,000, and we have a quota authorised for us of 500,000 quintals a year. On this quota we calculate to make fully 1s 6d a quintal, and it will not be very much trouble for you to calculate for yourselves what profits are likely to result from such a position as that, and what I really and candidly believe they will be. At the same time, we have the assurance that our grounds are showing up excellently well. A minimum estimate gives us fifteen years from the present time with our moderate extraction of only 250,000 quintals a year from each oficina ground. In conclusion, the Chairman moved that the report and accounts, as presented, be received and adopted, and that a dividend of 5 per cent., payable forthwith, be declared.

Mr J. M. Clarke seconded the motion, which was carried unanimously.

The Chairman then dealt with the controversial matters between himself and Mr H. W. Sillem, a member of the board, in the course of which he denied that there was any ground for stating that the company were entitled to recover "address" commissions against his late firm, Messrs Lloyd, Lowe, and Co., or himself. He said that the whole dispute was due to personal animosity, and he asked the shareholders to indicate by their votes whether they wished him to retain his seat on the board.

Dr J. M. Clarke then moved the re-election of Mr H. W. Lowe as a director. The company, he said, had gone through a long period of nitrate depression, and had it not been for Mr Lowe's energy and hard work would long ago have ceased to exist. They were in a sound position and on a dividend-paying basis, and he thought they should keep the man at the helm who was responsible to a very great extent for putting the company into that position.

Mr H. E. Morris seconded the motion.

Mr H. W. Sillem opposed the re-election of Mr Lowe, and stated that it would not be possible for himself and Mr Lowe to continue to serve on the same board.

After further discussion, Mr H. W. Lowe was re-elected by a large majority, whereupon Mr Sillem announced his resignation.

The proceedings then terminated.

ESTATE, FINANCE, AND MINES CORPORATION, LIMITED.

The annual general meeting of the shareholders in the Estates, Finance, and Mines Corporation, Limited, was held on the 6th instant at the Cannon street Hotel, London, Mr C. A. O. Bain (the chairman) presiding.

The secretary (Mr G. T. Ware) having read the notice convening the meeting,

The Chairman said he felt confident that the shareholders would be satisfied with the result of the past year's operations, and with the progress which the company had made during what had been a very trying and difficult period. He could not say much regarding their Johannesburg asset, but he was certain that it would yield a very good return on the money invested when the war was over. About five years ago Mr Rhodes said that the population of Johannesburg in time would amount to about 500,000 souls, and he (the speaker) was confident that, under the new *régime*, this prediction would be verified. The company's assets in Johannesburg consisted of building plots and buildings in the heart of the town, so that in any improvement which took place they would greatly benefit. In regard to the assets of the company in England, there had not been much change. The position in regard to the South Hill Park estate was improving, and he was confident that in time they would get a handsome profit on their investment. The Walmer Estates Company (Limited) proposed to have a sale of land at the end of the summer, and they were in hopes that they would be able to encourage some additional building on the estate. The Chairman then dealt at some length with the present position and the prospects of certain South African and Australian companies in which their company were largely interested, and specially alluded to the importance of their interests and rights in the Kamfersdam Mines (Limited). In the course of his remarks regarding the latter, he mentioned that since the report was issued an agreement had been come whereby the debentures would be made available for conversion into shares on the 1st prox., if the shareholders agreed to the alteration, instead of on January 1st next. By agreeing to convert their debentures into shares the holders would have the right to subscribe at par for one share in the new issue of capital it was proposed to make in the near future for every two shares now held. The effect of this would be to provide the Kamfersdam Mines, Limited, with £125,000 in cash, and free that company entirely from debt. In conclusion, he moved the adoption of the report and accounts.

Mr A. Derouet, in seconding the motion, said he fully believed that brighter prospects were in store for them. In 1896, at the request of the shareholders, he took a seat on the board, and received from his present colleagues a good reception and every civility. He looked into the assets of the company, and was very much reassured by his investigations. His idea had been that they should concentrate in South Africa all they could. In his opinion, South Africa would become a sure source of wealth, and they might depend upon it that where the soil produced wealth the population would follow. When peace and order were established, and the population of South Africa had increased, what would be the value of the company's shares? In Johannesburg and in Rhodesia land values were bound to double within a shorter period than perhaps might be imagined. Therefore, the shareholders might look with hope to the future.

A Shareholder asked for some information regarding the Fairfield Syndicate.

The Chairman replied that that, as he explained last year, was a mining venture which turned out wrong. They had to give up the mine as it did not pay. The Fairfield Exploration Company still held the ground, and he might tell them that this company had written down everything that they could lose on it. Only on the previous day they had had an offer from British Columbia for a large portion of the machinery on the Fairfield property, which they had accepted.

Mr Parry asked what was the value of the Kamfersdam diamonds.

The Chairman, in reply to questions, said that it was too early for him to say anything about dividends. He hoped, however, that within twelve months or thereabouts after the time when unrestricted traffic between Johannesburg and Cape Town prevailed, they would be able to make a distribution. The average value of the Kamfersdam diamonds was 35s.

The motion for the adoption of the report and accounts was then submitted to the meeting, and carried unanimously.

The retiring directors, Mr E. T. Somerset and Mr C. A. O. Bain, having been re-elected, and the auditors, Messrs Martin, Farlow, and Co., reappointed,

A vote of thanks to the chairman and directors terminated the proceedings.

YANA (WASSAU) MINES, LIMITED.

The adjourned statutory meeting of the shareholders in the Yana (Wassau) Mines, Limited, was held on the 3rd instant, at the offices, 21 Great St. Helens, London, Mr Thomas Wilkins presiding.

The secretary (Mr David J. Mockridge) having read the notice convening the meeting.

The Chairman said: At the last meeting the list of shareholders was produced to the meeting, and was laid upon the table open to inspection during the meeting. By reason of Mr Hutchinson, who has visited our property at Abbassi, being unable to be present, the meeting was adjourned until to-day, and a notice sent out to the shareholders notifying the adjournment. The directors have put before you in their report the facts relating to the acquirement of their property by the company, and they also inform you that a certain number of shares—55,000—have been taken up and

50,000 have been issued to the vendors as fully paid, so that, apart from the seven signatories, there remain 49,992 shares. The agreement that was made in 1901 by the company relates to a piece of land about a mile square, two miles by half a mile, known as the Bayiri and Boroko Mine, at Abbassi. With reference to the property, I cannot do better than refer you to Mr Cecil's report, upon which the company has bought the property. You have all had copies of Mr Cecil's report, and that gentleman has verified that report by declaration, and the directors, you will quite understand, have made all possible inquiries with respect to Mr Cecil, and fully believe that the statements he has made to them are true in fact, and it is upon that belief that they have acted in carrying through the agreement. The directors have also made arrangements for a thorough survey to be made by a very competent man, who holds the Gold Coast Government Survey licence, and who is well known as having had for some years the management of the Himan Concession while that property was in the hands of the African Estates and Mining Company. I think I will leave Mr Cecil to say a few words himself, and then I will ask Mr Hutchinson to address the meeting, after which I will put the motion for the adoption of the report.

Mr Cecil said: As you are aware, I have a very large interest in the company, and knowing what I do as to its probable chance of success, have no hesitation in accepting a seat on the board. I have spent a very considerable portion of my life in exploring and prospecting this part of Africa, which, by-the-by, I am certain will in the next few years prove to be one of the richest—if not the richest—goldfields in the world. I do not speak thoughtlessly, as I am intimately acquainted with nearly all the known discovered goldfields, including South Africa, British Columbia, Klondyke, Australia, north, south, east, and west, as well as Guiana and other places. The first time I was on the West Coast I quickly saw its possibilities, and I explored a great part of the country near the Coast. My means at that period of my life were not too extensive, and I contented myself by taking an interest in only one property, the best I had seen upon that, my first trip. That property was the Aubassi, which is now the property of an English company, and the £1 shares stand, I think, at the present time at £7 a share. Last year I made another visit to the Gold Coast Colony, and with better means at my command was able to do a good deal more prospecting than upon my first visit. I devoted my time and energy to making a thorough investigation, and I eventually obtained from the chiefs owning the land and mineral rights the lease of the mine now owned by this company. This was not so easy as some people might think, as the land I wanted contained one of the best gold-producing reefs in the district. However, I obtained it, and now we hold it, and I tell you that you own what I consider the very best mine in West Africa It simply wants proper development and good management to make it the premier mine of the country. As stated in the report, there are at least three good reefs on the property. The largest, No. 1 reef, is a splendidly defined reef, and you could hardly wish for a better It is, I should say, quite 14 feet wide on the average; it goes down almost vertically, and carries good gold all through. I personally tested it all through—that is to say, I sampled it every few feet, taking hundreds of samples, which I afterwards panned. My pannings went from 2 ounces up to 18 ounces to the ton. Now, I want to be very conservative, so will only base my calculations upon 2 ounces to the ton. So, allowing anything you like for working expenses, a reef like you have, giving 2 ounces to the ton, means—well, it means a fortune to the owners. Mind you, I did these samplings and pannings myself. I must also tell you that you have two other reefs that, although not so large, will yield nearly as good results. I also ought to mention that we have thousands of native shafts and workings upon the property. Now, gentlemen, in conclusion, I may tell you that I am going to sink or swim by this undertaking. I have a large interest in the company, and I mean to make it a success.

Mr Hutchinson said: I have formed a very high opinion of the property. I have travelled through the whole of the Gold Coast, and have been a member of many expeditions into the mining districts. The district in which the Yana Mine is situated is one of the best which I have inspected. The chief who granted the lease to Mr Cecil is a personal friend of mine of some years' acquaintance. He is a professional native miner, and was the founder of the Bibiani Mine. The village of Abbassi was built by the ancestor of the chief who granted this lease. That the district is a good mining area is evidenced by the shafts which are found all over the neighbourhood, and I may add that, owing to its reputation in this respect, other chiefs and their people come to mine in this district. I went over the property with Mr Cecil, and was present when the samples were washed, and I may say they all showed visible gold. With respect to the title, there is not likely to be any trouble. I have had transactions with the chief who granted the lease, and have always found him to be fair dealing. With regard to transport, the shortest road would be to Dixcove, but you will probably be induced by the facilities offered to adopt the Axim route, whence there is a good Government road to Tarkwa. That would mean making a road of five miles from Abbassi to join the Tarkwa road. Another favourable point is that the natives are willing to do mining work. They prefer mining work; the Appollonians have been brought up to it. Then there is a lot of timber on the property—any amount for fuel; and there is also a great deal of mahogany.

The Chairman: You have heard, gentlemen, what Mr Hutchinson has to say, and we are much obliged to him for coming here to-day and giving us this information. We cannot obtain too much knowledge of the Gold Coast and its resources. It is astonishing how little has been done by the Government to open up the country. I think we hardly know the real value of the colony. I now move that the report presented to the statutory meeting by the directors be approved and adopted.

Mr C. T. Shores seconded the motion, which was unanimously carried.

Messrs McAlister and Co. having been appointed auditors,

A vote of thanks to the chairman terminated the proceedings.

MURCHISON ASSOCIATED GOLD MINES, LIMITED.

An extraordinary general meeting of the shareholders in the Murchison Associated Gold Mines, Ltd., was held on the 3rd instant at the Cannon street Hotel, London, for the purpose of considering resolutions for the reconstruction of the company, Mr Robert Emeric Tyler presiding.

The Secretary (Mr W. Fenton Pugh) having read the notice convening the meeting,

The Chairman said: Gentlemen,—Whilst regretting the necessity which has arisen for a further reconstruction of this company, we must really congratulate you, as shareholders of the company, upon the very great potentialities of your property. Before, however, dealing with the property and its prospects, I desire first to thank those of our largest shareholders, who hold more than a quarter of the interest in this company, for the great financial assistance they have given to us. They have given it to us, because they believe in the prospects which we have before us. They have not only provided us with money for some long time past to continue developments upon our mine, but they have placed to our credit a sum of money to carry through this reconstruction without any difficulty. I think I might mention, and it will be interesting to you to know, that even at the present time we are in a position to crush; in fact, we had a cable from our manager last week asking that he should be allowed to go on crushing. He can crush ore worth from 9 to 10 dwts, but we have considered it a proper policy to adopt to devote all the capital we have at the present time to the rapid sinking of the main shaft. Our desire is as rapidly as possible to get down to where we have every reason to believe payable gold is to be found. I am pleased also to be able to tell you, gentlemen, that we have no necessity to pay for any underwriting. There may be many gentlemen here who are not conversant with our property, and I would wish you to know that we have a property which is very nearly fully equipped—that is to say, we have 10 stamps absolutely at work. We have another 10 stamps on the ground; we have hoisting and pumping plant, and everything necessary, with one exception, and that is rock drills and air compressors. These it is our intention to order as soon as this reconstruction is carried through, because our object is naturally to get down as rapidly as we possibly can, and that will be our first object; but you will thoroughly understand that we have a 10-stamp battery ready for work, and if you would like to see a photograph which we have here it will show you the stamps. Now, gentlemen, in detailing the prospects of our property it is necessary for me to ask you to give me your attention for a short time to the history of the Great Fingall Mine. I have no doubt all of you who follow mining matters know that the Great Fingall Mine is, probably, and will be, no doubt, the greatest mine in Australia. It is a mine of which the shares at the present moment stand at £8 10s, and when I tell you that two years ago, or less, a year ago, before it belonged to the Fingall Company, these shares practically stood at 2s, you will agree with me that that is a very rapid rise indeed. When I was in Cue and Day Dawn in 1895 that mine was not called the Great Fingall—it was called the Day Dawn, and it was a mine which had been worked for two or three years before, and certainly not at a profit. Perhaps, sometimes, it had returned a small one, but when I tell you that last year, when they had arrived at a depth of 240 feet, they were in debt £14,000, you can draw your own inferences. However, Messrs Bewick and Moreing—probably one of the best firms of mining engineers—who were advising the Great Fingall people, urged upon them to purchase, or to take over, the Day Dawn mine. This they did. They took it over, and they gave to every one of the shareholders in the Consolidated Murchison—that was the name of the company working the Day Dawn—one share of £1 for every 10 £1 shares they held, which works down to 2s per share. They not only did that, but they paid the liabilities, £14,000. It was a very plucky thing for them to do, but the result has turned out enormous. The advice of Messrs Bewick and Moreing was that they should sink their shaft from 240 feet to 340 feet, and when that was done they came upon gold ore that was worth from 3 ounces to 2 ounces a ton, and the average right through their drive—540 feet—was 1½ ounce per ton, or more. Well, gentlemen, they were not satisfied with that. They sunk to the 440, 540, and 640 feet levels, and at each level they found practically that the gold increased in value and in quantity. The reef, I think I am right in saying, at that depth is something like 20 feet wide, and it gives on an average something like 2 ounces to 2½ ounces. Now, gentlemen, I have told you this for this particular reason. Probably many of you have had circulars in which a plan has been given, but it is not given to every man to understand a plan. You will see at the lower part of the plan the Great Fingall Mine coloured pink, and then you will see it passes through some leases that are not coloured, and then you come to our mine, the Rubicon, which is coloured blue. Now, I am not saying this on hearsay evidence; I am going to give you in a minute or two the evidence on which it is based, so that there can be no doubt about it, and you may be satisfied with the statements I am making, and which can be borne out by good evidence. The Chairman then read extracts from various reports and letters all tending to bear out his statements, and then proceeded as follows: I think I have now given you an amount of information in connection with the probable prospects of

this company, which, I consider, must carry weight with you. You have a property here that it would be really sinful, with the information which we have before us, to abandon. If you abandon the mine it would mean that five months afterwards someone else would stick in his pegs, and would reap the advantage of the amount of work we have done and of the knowledge we have obtained. I cannot imagine for a moment that there would be a single shareholder who would act so unwisely as to withdraw his support from the company at the present time. I cannot imagine that that is possible. The advantage is enormous. The capital of the Great Fingall is £150,000; ours will be £75,000, or just half. Well, consequently, if we get down to that level, and our shares are worth money, the result will be that, instead of our shares being £8 10s on the market, as the Great Fingalls are, they will be £17. I think that ought to appeal to everyone—it is a solid fact. In conclusion, he moved the necessary resolutions.

Mr Watson (a shareholder) seconded the motion, which was carried unanimously.

A vote of thanks to the chairman terminated the proceedings.

MOUNT LYELL COMSTOCK COPPER COMPANY, LIMITED.

The annual general meeting of the shareholders in the Mount Lyell Comstock Copper Company, Limited, was held, on the 4th inst., at Winchester House, London, Mr. Hector Macdonald (the chairman) presiding.

The secretary (Mr Thomas Urquhart) having read the notice convening the meeting,

The Chairman said: Gentlemen,—It now devolves upon me to move the adoption of the report and balance-sheet, and in doing so I shall not tax your patience with any lengthened remarks. The statement you have before you, accompanied by reports and plans, was intended to, and I think does, contain substantially all the important information concerning the property that the directors are in possession of, and anything I may say will be merely in amplification. The expenditure, as you will notice, has been mainly directed towards exploration and the development of the mine, and the result of the work has been very satisfactory indeed. It has opened up and made accessible those large deposits of ore which are referred to in the reports and made them available for future treatment by the smelters Incidentally, the work has confirmed that very high estimate of the property which all who knew it in the past entertained regarding it. It would have been very pleasing to the directors to have devoted still more energy and money to the exploration of the property, because they are confident that the mine would have responded by showing still more extensive ore deposits. The question, however, of the existing means of transport determined them not to proceed extensively in that direction; they determined to do the minimum of work rather than to expend extra money in further development. When the steel rails of a railway have superseded the packhorse, which is the means of transport we mainly have to use now, it will be quite a different thing, and then that work will be energetically resumed. All this, of course, points to the question of the railway; that is manifestly our most important requirement. It was designed, as you know, to attach ourselves to the North Mount Lyell Railway by means of a branch. Unfortunately, that railway was very greatly delayed in its completion, the contractors being more than a year behind the time at which they undertook to have it completed. It is unnecessary to go into the question of why and how this occurred. Apart from that, we have since met considerable embarrassing and tedious situations created by the rights of proprietors over whose properties it became necessary to bring our line. These have caused very great trouble and delay; they have resulted in our having to consider deviations and also alternative schemes and the surveying of alternative routes to get over them. Our latest information is that we have secured a route which will avoid these difficulties. The North Lyell Company, in order to overcome them, introduced a Bill into Parliament—it is before Parliament now—but we were anxious to anticipate that, and have adopted the privileges given by the regulations under the mining laws of Tasmania, which afford opportunities for the construction of all sorts of ways, including tramways, and in this we have been supported by the Minister of Mines, who saw with ourselves that it would perhaps be the speediest way through the difficulty. You can easily see that while these negotiations were in progress a considerable amount of reserve had to be maintained in the discussion of them, and that is the only reason why this meeting was not held many months ago. It could have been held but for the fact that we had to maintain, as business men exercising ordinary prudence, a certain reticence, so that we should not embarrass the situation by the publicity which would necessarily result from discussing these matters before a meeting of shareholders. We were also anxious, in coming before them, to be able to present something like a final statement of matters. We think we have got to that stage now, and that the matter will proceed without further delay. My co-director, Mr MacArthur, preceded another director, Mr Mackay, to the field more than a year ago, and he, having been more recently at the mine than myself, can, if necessary, enlighten anyone as to the topographical features of the case. I myself expect to be on the field within the next seven or eight weeks, for I leave next week for the other side, and I shall be, of course, on the spot to do all I can to push matters ahead. The North Mount Lyell Company is getting on with its smelters. These, as you know, are to operate upon our own ores under an arrangement which we have made with them. The non-completion of the railway at an earlier date has, of course, affected their erection also, as you could not even begin the preliminaries for the construction of another line and of smelters with their accessories before the main line itself was created for the purpose of carrying up the plant and materials required. I do not wish to prophesy. I can quite imagine that in the mines of shareholders the question is forming itself, when will you be ready? Will you give us a date when this ore will be undergoing the process of conversion into copper? Until I know that manufacturers' word can be relied upon to within a month or twelve months of their promises it is impossible for me to say, although I do feel that the distance is measurable by months, and that we are distinctly nearing the end that we have been so desirous of attaining. In conclusion, the chairman formally moved the adoption of the report and accounts.

Mr John S. MacArthur seconded the motion, which was carried unanimously, and, some formal business having been transacted,

A vote of thanks to the chairman terminated the proceedings.

* New 2½ per Cents.—Goschens.

The amount of the "other deposits" compared with the "other securities," showed in 1891 an excess of £3,392,598 and in 1898 an excess of £11,946,328, in 1899 an excess of £4,107,292, and in 1900 an excess of £11,141,871. In 1901 there is an excess of £14,804,340.

In the same week of 1898 the Bank rate was 3 per cent., the directors keeping it at that point as there had been a withdrawal of £800,000 in Japanese coin. There had been some expectation of a reduction, the outside rate for best three months' bills declining from 1¾ to 1⅝ during the week. On the Stock Exchange there had been an increase of animation, particularly in the Home Railway market.

In 1899 at this time there was an inflow of gold from the United States, and the abundant supply of money caused the condition of the discount market to be easier. The rate for best three months' bills was 2 3/16 per cent., with the Bank rate at 3 per cent. The Stock Exchange was very flat, a pronounced depression taking place upon the announcement that the conference between President Kruger and Sir Alfred Milner had failed to produce any definite agreement. Silver was quoted at 27 13/16d per ounce.

At this time in 1900 the Bank rate was 3½ per cent., money was in abundant supply, and rates tended towards ease, the quotation for best three months' bills being 2 11/16 per cent. News was received that Lord Roberts had occupied Pretoria, but this had little effect upon markets.

The following figures from the official returns show the amount of bills and cheques cleared at the Bankers' Clearing-house. Special days are given separately, together with the total increase or decrease to date in each case:—

In the above tables the Reichsmark is converted at 1s.; the Austrian crown at 10d.; the Dutch florin at 1s 8d.; and the franc, lira, and peseta at 25 per £. American currency is reduced into English money at 4s per dollar.

Discount and Loan Market.—The reduction of the Bank rate from 4 to 3½ per cent. on Thursday was fully expected, and, therefore, caused no more effect in the market than possibly to expedite to some extent the decline in rates, which was already in progress. The outside rate for best three months' bills is no better than 3 per cent., attempts to quote a little higher not being effective. Supplies having been plentiful, the small remaining debt of the market to the Bank has been quite cleared off, and loans have been very easy at 2 per cent. for day-to-day, and 2¼ to 2½ for weekly borrowings. The Bank Return explains the abundance of funds in the market, the Government disbursements being very heavy, as the Public Deposits have fallen £2,559,958, while the Private Deposits show an increase of £1,933,554. Market repayments to the Bank have released Other Securities to the amount of £785,683. The gold stock amounts to £36,633,228, or £553,842 more than last week. Of this £351,000 in gold came in from abroad, and the home circulation was consequently reduced by about £218,000. The note circulation, however, expanded by £175,053, and the net increase to the Reserve amounted to £393,757. It now amounts to £24,635,638, and the proportion of reserve to liabilities is 1¼ higher than last week, at 51¼ per cent. Following upon the reduction in the Bank rate, the banks have reduced their allowance on deposits to 2 per cent., and the discount houses have reduced theirs to 2 per cent. for money at call, and 2¼ per cent. at notice.

The subjoined table shows the rates quoted from day to day during the week:—

	Last Fri.	Sat	Mon.	Tues.	Wed	Thur.	Friday.
	%	%	%	%	%	%	%
Bank rate	4	4	4	4	4	3½	3½

* These rates range from those current on the very best paper to those paid on bills for which the Bank rate is usually required.

There was a fair demand for silver at the beginning of the week, and a rise of 1/16d took place on Saturday, making the price 27½d per ounce. Owing to the news that a French tender had to be filled in on Friday, another advance of 1/16d occurred on Monday to 27 9/16d per ounce. On Tuesday there was a moderate amount on offer, and the price relapsed 1/16d to 27½d per ounce. A further decline of a similar fraction on Wednesday made the price 27 7/16d per ounce, at which it remained on Thursday. Another fall of 1/16d has taken place today, making the closing quotations 27⅜d per ounce for spot, and 27½d per ounce for two months' forward delivery.

The following is from Messrs Pixley and Abell's Circular, dated June 6th:—

Gold.—Bar gold, fine, 77s 9½d per oz standard; United States gold coin, 76s 4d per oz; German gold coin, 76s 5d per oz; French gold coin, 76s 5d per oz; Japanese yen, 76s 4d per oz.

Silver.—Bar silver, fine, 27 7/16d per oz standard; bar silver, two months' delivery, 27⅜d per oz standard; bar silver, containing 5 grs gold, 27 15/16d per oz standard; bar silver, containing 4 grs gold, 27⅞d per oz standard; bar silver, containing 3 grs gold, 27 9/16d per oz standard; cake silver, 29 9/16d per oz.; Mexican dollars, 27¼d nominal. Quicksilver, £9 2s 6d—3 per cent. discount.

The India Council on Wednesday offered for tender Rs.5,000,000 in remittances on India. The tenders amounted to Rs.33,190,000 at prices ranging from 1s 3$\frac{7}{8}$d to 1s 3 31-32d. The following statement gives the result of the sales from the beginning of the current financial year :—

	Rs.		£
April 1, 1900, to March 31, 1901	202,243,693	....	13,459,737
April 1, 1901, to May 29, 1901	44,101,792	....	2,926,898
Week ending June 5th	6,052,588	....	401,306
	50,154,380	....	3,328,204

Allotments since last Friday :—

	Rs.	
Wednesday	2,797,000 in bills on Calcutta	At 1s 3 29-32d, about 18 per cent. and above in full.
"	1,259,000 in bills on Bombay	
"	944,000 in bills on Madras	
"	10,000 in bills on Calcutta	At 1s 3 15-16d.
"	20,000 in bills on Bombay	
"	100,000 in transfers on Calcutta	At 1s 4d.
Thursday	10,000 in bills on Madras	At 1s 3 15-16d.
Friday	16,451 in bills on Madras	At 1s 3$\frac{15}{16}$d.

Next week Rs.5,000,000 will again be offered.

We are informed that owing to continued ill-health Mr Edward Bowring Lemon retires from the firm of Malcolm Cooke and Lemon. The business will be continued by the remaining partners, Mr Malcolm S. Cooke and Mr Charles W. Bedford, under the altered name of Malcolm Cooke and Bedford, and the telegraphic address, "Lemon, London," will remain unchanged.

The Commissioners of Inland Revenue have entered into an agreement with the Borough of West Ham for the composition of the stamp duties payable on transfers of the Third Issue of 3 per cent. Redeemable Stock £400,000.

The foreign movements of gold to and from the Bank since last week have been as follow :—

New York exchange "Cable transfers" .... $4.89, or 5 per mille for us.

THE STOCK MARKETS.

Attendance in the "House" has been very thin on several days this week, business being very slack, and members having found attractions elsewhere. The decline in money rates and the reduction in the official minimum have lent some support to British Government and other gilt-edged securities, but in other departments quotations have tended to go slightly lower, simply from the absence of business. Inter-bourse stocks have kept steady, but South Americans have given way in most instances. Home Rails, after showing a very slight degree of firmness, went back again on the publication of a batch of discouraging traffic returns. Despite an occasional set-back, Americans continue to show a cheerful front, and are in almost every case higher in prices than a week ago. Canadians also exhibit a small improvement, and Indians continue to harden in isolated instances. Mexican Rails have receded again, but most of the movements in South Americans are towards better prices. Bank shares are a firm market, but the Miscellaneous groups generally are devoid of interest. The Mining markets have also been neglected, and in all sections prices are barely maintained.

Home and Colonial Government Securities.—At the settlement in Consols on Tuesday, the continuation rate was fixed at 5 per cent., and after it was arranged prices hardened appreciably. With the dividend off, however, though slightly higher actually than last week, the quotation looks low at 93½, and is, in fact, the lowest yet recorded. Each of the other Government stocks has recovered a small portion of the dividend, and Exchequer Bonds are quoted ¼ higher than last week. Canadian Guaranteed bonds of 1910 have risen 2, to 109, and the whole of the Indian stocks show some advance on the week, having recovered part of the amount of the dividends deducted. Colonials have been very quiet, but are well maintained in price. New Zealand Threes showing an advance of a point. Though the interest is very languid, a few dealings have taken place in British Municipal stocks, but where prices have moved it is in the downward direction. Portsmouth Three per Cents. have dropped from 99 to 96 on the offer of over half a million new stock at 95, and Walsall Threes have fallen 2 points.

Foreign Government Securities.—The bears of Spanish appear to have been repurchasing, the price having recovered a full point. Portuguese also show a fairly substantial improvement, and Turkish Groups have hardened all round. Servian bonds have risen 2, as the King and Queen having been driving together, it is concluded that affairs in the little kingdom are simmering down to some extent. The Greek loans, on the other hand, have given way generally. Chinese loans have again moved up, on the rather optimistic views of the settlement expressed by the French Foreign Minister. In the South American section Argentines have moved in rather an uncertain fashion, and while the Internal Gold Loan of 1888 and the Funding Loan have advanced, several of the 4 per cent. issues have given way. Brazilians are 1 to 2 points lower generally, while a little interest seems to have been awakened in Chilians, which have been quite neglected for some time past, and each of the loans from 1887 to 1896 are quoted a point higher than last week. Uruguays are steady at 48½ for the 3½, and 63 for the 5 per cent. bonds.

The following are the latest closing prices, &c., of some of the leading stocks:—

British Railways.—The traffic returns for the corresponding week last year were swollen by the long-distance Whitsuntide receipts, and some very heavy decreases are shown. This was, of course, to be expected, but it has nevertheless resulted in still further depressing quotations. South-Eastern and Chatham stocks have shown special weakness, Dover "A" being 4 lower on the week, while Chatham First Preference has lost no less than 10¼, and the Second 4 points, the Ordinary being ½ down also. Brighton "A," Lancashire and Yorkshire, Metropolitan, and North Staffordshire have each declined about 2 to 4 points. District advanced at one time, the scheme for adopting electric traction having been explained and accepted at a meeting of the stockholders during the week; but that stock has declined again at the close. North-Eastern Consols have kept steady, the traffic receipts of that company for the half-year making about the best comparison with those of the corrresponding period. Great Western and North-Western also show but little change, while Midland Converted stocks have each fallen heavily. Declines of moderate extent are shown in Great Northern, Great Eastern, and Great Central stocks. The Scotch stocks have been neglected, and both North British and Caledonian Deferred are quoted lower than last week.

The traffic returns of eighteen principal English and Irish lines, as given in the accompanying table, show a decrease of £115,429, equal to 6·6 per cent. for the week, as compared with the corresponding week last year, and the three principal Scotch lines show a decrease of £2,039, equal to 0·9 per cent. For the current half-year the English and Irish lines exhibit a decrease of £165,207, or 0·5 per cent., while on the Scotch lines there is a loss of £49,958, equal to 1·4 per cent. The latter are calculated from February 1st instead of from January 1st, as in the case of the English and Irish companies.

Subjoined are the latest closing prices of the more important issues as compared with last week's prices. The making-up prices at the last settlement are also given for reference purposes:—

American Railways.—The movements in this market continue to be of a somewhat bewildering character, shares moving up several points one day and losing them the next. The advices from the other side deal very little with the position and prospects of the roads, but are mainly devoted to speculations as to what new operation this or that financial group has in contemplation. The shares most in evidence this week have been Atchisons, Denvers, Norfolk and Western, Southern Pacific, and Southern Railway, and these show advances ranging from 5 to 8 points. Milwaukees, though not much dealt in here, are quoted 6 higher than last week. New York Central have risen 5, and Illinois Central and Union Pacific 4 to 4½ each. Smaller advances have occurred in Baltimore and Ohio, Missouri, and Erie. The nominal quotation for Northern Pacific is now 120-160, against 150-200 last week. Some dealings have taken place in bonds, and Chesapeake and Ohio General Mortgage have risen 3, and Atchison General Mortgage, Baltimore (south-west division) Central Pacific 3½ per cent., and Denver First Consolidated 1 each.

The following are the latest closing prices, &c., of the most prominent issues:—

Colonial and Foreign Railways.—Although there have been occasional relapses, the general tendency of Canadian railways has been good. The Grand Trunk traffic return giving the satisfactory increase of £9,398 supplied a fillip to the stocks, the Preferences each being quoted higher than last week. Canadian Pacific shares have relapsed to-day, and are on balance ¾ down, at 107¾. Among Indian railways, Bombay Baroda continues to receive support, being 2 higher, at 184½. Advances have also occurred in Bengal Dooars and Madras stocks. Mexicans have more than lost the recovery shown last week, the First Preference having relapsed 2½ and the Second 1½. Argentine railways have improved in several cases, Buenos Ayres and Pacific Ordinary and Central Argentine 3½ per cent. Debenture stock being 2 higher, while Cordoba Central Second Preference has risen 4. Brazilians have advanced as a rule, San Paulo being 3 higher, and there are advances in Minas and Rio and San Paulo Debenture stocks. There is a fall of 12 points in the 5 per cent. Debenture bonds of the Piraeus Athens and Peloponnesus Railway Company.

The following shows the net movement on the week in some of the principal issues:—

	Closing Prices— Last Week.		Closing Prices— To-day.		Rise or Fall.		"Making-up" Prices. May29.		May15.

Mines.—The Mining markets have been exceedingly quiet this week, and variations in prices are small and irregular. Even in West Africans speculation has been reduced to narrow limits, and price movements are merely fractional. Slight advances are shown in Abbontiakoon, British Gold Coast, London and West African Exploration, Taquah, and Wassau; while Atlas, Bibiani, Gold Coast Estates and Mansu are quoted lower. Some substantial British successes have been reported from South Africa during the week, and the first crushing return has come from the Treasury mine. These favourable circumstances, however, have had but little effect upon prices, declines, in fact, being in the majority. Rand Mines and East Rand are a fraction lower than last week, and there are small losses in Ferreira, Knight's, Modderfontein, and Durban-Roodepoort Deep. Westralians have also been flat for the most part, Lake Views are ⅜ lower, at 9¾, and Golden Horseshoes have declined to about the same extent, while there are smaller declines in Ivanhoe, Golden Link, Associated and Westralia Mount Morgans. Great Fingall shares show a fairly substantial advance, and there is a trifling improvement in Sons of Gwalia. Indians are steady as a rule, and Waihi are the turn harder. Copper shares have been very quiet, and while Rio Tinto have hardened slightly Utah and Mount Lyell North are quoted lower.

The following are the prices and variations of the more active shares:—

Miscellaneous.—Bank shares have been freely dealt in, considering the languid interest in general securities. Among London banks the shares of the London and South-Western, London and Westminster, Joint Stock, and Union have advanced, and with regard to foreign and colonial, Bank of Egypt, Bank of New South Wales, Chartered of India, and Union of Australia have advanced, while small declines are marked in Bank of Australasia, Imperial Ottoman, and National of Egypt. County of London and Brush and Metropolitan Electric shares have advanced, while South Metropolitan Gas is a point lower. Among Industrials the shares of the several companies doing business in South America show an improvement, among them being Anglo-Chilian Nitrate and Railway, Rio de Janeiro City Improvements, and River Plate Fresh Meat. Advances have occurred in Palace Theatre, "E. C." Powder, and Price's Patent Candle, while British Insulated Wire, Greenwich Inlaid Linoleum, and Ebbw Vale Steel have declined.

Notices and Reports.

GOVERNMENT STOCKS, ETC.

CORPORATION OF LONDON.—The Corporation of London gives notice, through the Chamberlain (Sir Richmond Cotton), of the payment of bonds falling due in 1901 amounting to £154,200, but offers to the holders the option of renewing same for a period of five years by bonds carrying interest at the rate of £3 per cent. per annum at a price of £98 per £100. The option of renewal must be exercised on or before June 22, 1901. Full particulars appear in our advertisement columns.

RAILWAY COMPANIES

ARGENTINE NORTH-EASTERN.—The report for the year ended December 31st states that the traffic receipts (in sterling), exclusive of construction material, show an increase of about 7½ per cent. over those of 1899. The result of the working of the railway for 1900 was a profit of £838, as compared with a loss of £2,504 for the year 1899 and of £5,038 for the year 1898. The fifth and last distribution of rescission bonds to the preferred stockholders has been carried out in accordance with the provisions of the scheme of arrangement. The directors have this year distributed to the holders of ordinary debenture stock the sum of £2 per cent. in cash on the amounts of their respective holdings instead of, as heretofore, £3 per cent. in Government bonds.

DELHI UMBALLA KALKA.—In a circular to the shareholders, enclosing warrants for the interim dividend for the half-year ended

December 31, 1900, of 2 per cent., declared on May 1st, the directors state that the gross earnings for the half-year amounted to Rs.6,36,437, against Rs.7,55,246 for the corresponding period of 1899. The board have charged against the earnings for last half-year the amount (Rs.52,997) expended up to December 31st last on repairing the damages caused to the line by floods. After paying the interim dividend the amount carried forward is £12,447.

GREAT INDIAN PENINSULA.—The report now submitted deals, for the first time, with the amalgamated systems of the Great Indian Peninsula and Indian Midland Railways under the contract with the Secretary of State for India in Council of December 21, 1900. On the termination of the former contract, the Great Indian Peninsula Railway passed into possession of the Secretary of State on July 1, 1900, and during the period under review, that is the half-year to December 31, 1900, was worked by the Government, who appointed as manager Mr Henry Wenden, who had previously been the chief engineer of the company. The management of the Indian Midland Railway remained in the hands of the board of that company until January 1st last, when it was transferred to the Great Indian Peninsula Railway, by virtue of the provisions of the Purchase Act of 1900, and in conformity with the terms of the new contract. Although the effective amalgamation of the two systems for working purposes did not take place until January 1, 1901, the revenue accounts now presented represent the results of working the entire system. They show gross receipts Rs.1,91,81,888, expenditure Rs.1,10,00,409, and net revenue Rs.81,81,479; after deducting interest on capital provided by the Secretary of State for India for the purposes of the two systems during the half-year there remains Rs.81,72,355. The half-yearly amount stipulated to be payable to the Government is 100 lakhs. There is, consequently, a deficit of Rs.18,27,645 to be carried forward as against next half-year's account, when the statement for the first complete year will be made up for the determination of surplus profit, if any, according to the provisions of the contract. In addition to the issue of £1,750,000 3 per cent. guaranteed stock in lieu of annuity, £325,000 of similar stock was issued to holders of £750,000 Indian Midland Railway stock, and thus the total amount of 3 per cent. guaranteed stock in this company is £2,575,000. The annuity trustees announce that "complaints have been made by annuitants with regard to the levy of income-tax by the Inland Revenue authorities upon the whole amount of the annuity, without regard to the consideration that a portion of the annuity represents repayment of capital, and the trustees have consulted eminent counsel as to the legality of this demand. They have been advised that the point ought to be raised in the interest of the annuitants, and proceedings will be taken to obtain a judicial decision at the earliest possible moment."

MADRAS.—The gross revenue for the past half-year was £503,535, showing a decrease of £16,858; the expenditure was £261,356, being a decrease of £14,558, and the net revenue is £247,179, or a decrease of £2,300. The deficiency on the guaranteed interest for the half-year amounted to £20,953. The total number of passengers carried was 4,076,596, an increase of 115,296. The decrease in gross receipts for goods traffic was £22,810, and the tonnage carried 539,114, a decrease of 26,613 tons. The large decrease in the receipts is more than accounted for by the smaller quantity of grain and pulse carried as compared with the corresponding half-year, when there was a famine north of Raichur, and the grain traffic carried both to Calicut for Bombay and to *via* Raichur was altogether abnormal. With regard to the lines worked by the company, the gross earnings of the Mysore State Kolar Goldfields Railway showed an increase of 14·10 per cent. The net earnings, Rs.38,454, gave a return to the Mysore State at the rate of 7·14 per cent. per annum upon the capital outlay. The gross earnings of the Nilgiri Railway for the period under review were Rs.92,935. The charge for maintenance for the half-year, representing actual cost, amounted to Rs.24,665, and the charge for working amounted to Rs.35,000. The board have renewed their application to Government for the control of the proposed Vizianagram-Raipur line, offering to construct and work it, or only to work it, as may be desired by Government, but no definite reply to the board's representations has been received as yet.

NORTHERN PACIFIC.—Statement of net earnings for the month of April, 1901, and for the ten months ending April 30, 1901, compared with the corresponding periods of the previous year:—

ST. LOUIS AND SAN FRANCISCO.—This railroad has determined to readjust and refund its bonded indebtedness and the underlying bonds secured by liens upon its system of railroads, and for that purpose has determined, subject to the obtaining of the approval by its stockholders of the requisite corporate action, to create its refunding mortgage fifty-year gold bonds of a total authorised amount limited to $85,000,000, face value, at any time outstanding, of which about $62,500,000 of bonds are to be issued and reserved for refunding purposes, and the bonds not required for refunding purposes are to be reserved and issued for additions, extensions, betterments, and improvements of its system of railroads and property and for additional equipment and property. The railroad company has agreed to sell $30,000,000 of the new refunding bonds, or such portion thereof as may be duly authorised to be issued under the refunding mortgage, to a syndicate of which Messrs J. and W. Seligman and Co. are syndicate managers, and the syndicate managers have already completed arrangements for the acquisition of about $20,000,000 of underlying bonds which are to be exchanged for new refunding bonds. At the request of the railroad company, the syndicate will offer to holders of underlying bonds the privilege to exchange the same for new 4 per cent. refunding bonds to be acquired by the syndicate, and the railroad company recommends holders of underlying bonds to exchange their bonds for new refunding bonds. Particulars of the bonds affected appear in the advertisements. The London depositories are Messrs Seligman Brothers, 18 Austin Friars, E.C.

BANKING COMPANIES.

BANK OF ADELAIDE.—The report made up to March 25th shows a balance to credit of profit and loss of £49,498, and it is proposed to place to reserve fund the sum of £15,000 and to pay a dividend at the rate of 8 per cent. per annum, the balance carried forward being £18,498.

BANK OF MONTREAL.—The following is a statement of the result of the business of the bank for the year ended April 30, 1901:—Balance on profit and loss account, April 30, 1900, £87,777; profits for the year ended April 30, 1901, after deducting charges of management, and making full provision for all bad and doubtful debts, £315,929—£403,706; dividend 5 per cent., paid December 1, 1900, £123,288; dividend 5 per cent., payable June 1, 1901, £123,288—£246,576; balance of profit and loss carried forward, £157,130.

LONDON AND SAN FRANCISCO.—At the ordinary general meeting a dividend at the rate of 6 per cent. per annum (making 6 per cent. for the year), and £5,000 was placed to reserve account.

NATIONAL OF AUSTRALASIA.—The report for the year ending March 31st last states that the net profit, after deducting expenses of management and the other items specified in the profit and loss account, amounted to £31,831; balance from previous half-year, £11,737—£43,568; deduct note and income-taxes in Australia and Great Britain, £3,383; leaving available £40,185, which it is proposed to appropriate as follows:—Dividend at the rate of 5 per cent. per annum on preference shares, £7,644; dividend at the rate of 3 per cent. per annum on ordinary shares, £17,837; carry forward, £14,654—£40,185.

ROYAL BANK OF SCOTLAND.—The half-yearly interim report states that the net profits of the half-year which ended on April 13th last, after all necessary deductions, amounted to £104,170. The directors recommend a half-year's dividend at Midsummer, at the rate of 9 per cent. per annum, free of income-tax, £90,000; leaving a balance of £14,170 over and above the rest of £844,079.

WESTERN AUSTRALIAN BANK.—The report for the half-year ended March 25th states that the net profit, after providing for bad and doubtful debts, for rebate on discounted bills current, for interest on deposits, and for expenses on management, was £11,787, making, with the balance from previous half-year, a total of £33,154. The directors have resolved to pay a dividend of 17s 6d per share (17½ per cent. per annum), tax free, and to carry forward £24,404. Branches have been opened at Mount Morgans and Kookynie.

ASSURANCE COMPANIES.

IMPERIAL.—At the annual meeting yesterday, the report of the directors for the year ending December 31st last showed premiums received £736,688, and losses £451,462. A dividend of 15s was declared for the half-year, making, with the interim dividend of 10s paid in January, £1 5s per share of £20 (£5 paid), the same as for preceding four years. The funds of the company, after the payment of this dividend, stood at £1,260,977 exclusive of the paid-up capital of £300,000.

MUTUAL LIFE ASSOCIATION OF AUSTRALASIA.—The annual report shows new business completed, £623,388; renewal premiums increased by £10,000 to £150,454; interest revenue increased by £3,378 to £62,242, thus making the total income nearly a quarter of a million sterling. The invested funds now exceed £1,445,000, and policies are in force for over five and a-half millions. The mortality experience continues satisfactory; as although the claims are naturally larger in amount than the singularly favourable experience of 1889, they are considerably less than the expectation. The special assurances on the Transvaal contingent terminated in December last, and yielded a satisfactory profit after paying all claims and making large refunds as arranged to the Queensland Government and the New South Wales Lancers' funds, by whom the original policies were effected.

NORTHERN.—The report for the year 1900 states that in the fire department the net premiums amounted to £752,310, showing an increase of £43,119 in comparison with those of the previous year. The net losses were £417,189, and the total expenses of management (including commission) were £259,076, the year's operations, after providing for liability under "current risks," resulting in a profit of £58,797. In the life department 1,202 policies were issued for new assurances, amounting in the aggregate to £550,463, yielding in annual premiums £16,553. The total income of the year (including interest) was £389,943, and the increase of the funds in respect of the year's working was £153,859. The quinquennial investigation into the condition of the life business shows that there is a surplus in the non-participation branch of £33,804 (of which the

BANK STATEMENTS.

The following statement shows the position at the end of MAY of banks which issue monthly statements of accounts:—

directors propose that £30,000 should be carried to the profit and loss account), a surplus in the participation branch of £310,442 (out of which it is proposed to declare a reversionary bonus of £1 11s per cent. per annum, absorbing £299,397), and a small profit in the annuity branch of £8:2, which it is proposed to leave at the credit of this branch. The tables used in the investigation have been the Institute of Actuaries Hm and Hm (5) for the assurance branches, the rate of interest assumed being 2½ per cent., and Finlaison's Government Annuities (1883) for the annuity branch, the rate of interest assumed being again 3 per cent. The balance of profit and loss account, after charging it with the interim dividend paid in December last, amounts to £210,715, to which has to be aeded £30,000 proposed to be transferred from the non-participation fund, making in all £240,715 to be dealt with. Out of this the directors propose to add £10,000 to the staff pension fund, to pay a further dividend of £1 10s and a bonus of 10s per share, to set apart specially the sum transferred from the non-participation life branch for the purpose of paying, in five yearly instalments, a shareholders' life bonus of £1 per share, being 4s payable in each of the years 1901 to 1905. The foregoing will absorb in all £100,000, and leave £140,715 to be carried forward to the year 1801. The total accumulated funds of the company on December 31, 1900, amounted to £5,698,299.

ROYAL.—The accounts for the year 1900 show: the net fire premiums amount to £2,078,299; the losses to £1,240,062; and the surplus on the fire business carried to profit and loss, £124,849. The profit and loss account is credited with £117,228, interest not carried to other accounts, and after payment of dividend and income-tax, a balance of £827,288 is carried forward. In the life department the new business is £866,584; the total premiums, after deducting reassurances, £482,514; and the life funds at the end of the year, £6,113,786. The dividend recommended is 20s per share (including 4s per share from undivided life profits), making, with the 18s paid in December last, 38s for the year. The total funds at the end of the year, after payment of dividend amount to £9,885,404.

MISCELLANEOUS COMPANIES.

A. W. GAMAGE.—The net profit for the year ending January 31st, including £151 brought forward, amounted to £8,129, which, after deducting preference and debenture interest, left a balance of £5,418. The directors write off £1,975 from the formation account, place £315 to reserve, and declare a dividend of 5 per cent. on the ordinary shares, leaving £315 to be carried forward It is proposed that the capital be increased by the issue of 25,000 ordinary and 25,000 preference shares.

ANGLO-CHILIAN NITRATE AND RAILWAY.—The report for the year 1900 states that the gross profit was £103,000, as compared with £76,945 in the previous year. After providing for the full service of the loans and all other charges, and after writing off £10,000 for depreciation of property, and setting apart £10,000 for a renewals account, there remains a disposable balance of £42,844, which, with £13,927 brought forward, leaves the amount available for distribution £56,771. Interim dividends, each of 7s per share, were paid in December and in March last, amounting together to £24,500, and the directors now propose to distribute a further sum of 14s per share, thus covering the preference dividend to December 31, 1898. This will leave a balance of £7,771 to be carried forward.

BARCELONA TRAMWAYS.—The report for the year 1900 states that the total receipts amounted to £99,872, the working expenses to £69,728, and the loss on exchange to £9,234, the net profit, including the amount brought forward, being £22,120. The service of the debentures and debenture stock absorbs £10,264, the dividend on the preference shares £5,000, and, after deducting the loss on realisation of stud and the suspense account, there remains £317 to carry forward.

BRISTOL TRAMWAYS AND CARRIAGE.—The directors have decided to issue the further 25,000 4 per cent. cumulative preference shares created at the last general meeting, and registered holders of the company's debenture stock, preference and ordinary shares have the privilege of applying for the new shares at par.

ELECTRIC AND GENERAL INVESTMENT.—The directors recommend a dividend for the year ended May 31st on the ordinary shares of 5s per share, of which 2s per share was paid on account in December last, leaving 3s per share to be distributed, and a bonus of 2s per share, making together a present distribution of 5s per share, or 25 per cent., or a total distribution of 7s per share, or 35 per cent. for the year. On the founders' shares a dividend for the year ended May 31, 1901, of £50 per share is proposed.

IMPERIAL RUSSIAN COTTON AND JUTE FACTORY.—The report for the financial year ending January 13, 1901, which corresponds to December 31, 1900 (old style) in Russia, states that the credit balance carried forward from last year was £10,822, from which has to be deducted loss on the present year's working, including debenture interest, depreciation, and provision for bad debts £6,806, and the directors recommend reduction of the expenses in connection with the new debenture and share issues, £507—£7,313, leaving to be carried forward to the credit of next account £3,509. The directors regret their inability to recommend the payment of a dividend on the present occasion. The poor results of the present year are due to (*a*) the harvest of last season having turned out much worse than was anticipated; (*b*) the keen and cutting competition among industrial concerns throughout the Empire of Russia.

INDO-CHINA STEAM NAVIGATION.—In the report for the year 1900 the directors remark that the startling events that have taken place in Northern China during that year have not had the disastrous effect on the shipping trade which might have been looked for. It is true that the customary business with Chefoo, Tientsin, and Newchwang has been seriously interfered with, but this loss has been compensated by the necessities of the fleets and armies, and by the extent of trade in the Southern Provinces. Competition by foreign shipowners for the coasting and river traffic is, however, even more keen than before. In these circumstances it is satisfactory that the working account shows so large a surplus, which enables the board to recommend an increased dividend. The disposable balance amounts to £63,335, which the directors propose should be appropriated to the payment of a dividend of 6 per cent., making, with the interim dividend paid in November last, 10 per cent. for the year, together with a bonus of 4 per cent., free of income-tax. This will leave an amount of £13,747 to be carried forward. The directors have thought it expedient to open a general reserve fund, which is credited with £70,000 from accumulated profits.

JETINGA VALLEY TEA.—The report for 1900 shows a profit of £686, and, after making sundry adjustments, the balance at the credit of profit and loss account is £604, which, less £24 for the managers' commissions, it is proposed to carry forward. The crop of tea realised an average of 5·82d per pound, as compared with 7.02d in 1899, this reduction of 1·20d per pound representing £5,000.

J. W. BENSON.—The report for the year ended March 31st last states that the net profit is £52,434, and includes dividend on the shares held by the company in Hunt and Roskell, Limited, to December 31, 1900. The balance carried forward from the preceding year, £12,751, being added, makes a total of £65,185 to the credit of profit and loss account. After providing for the debenture interest and a transfer to the reserve of £5,000 (making it £50,000), there is a balance of £31,435. The directors propose a further dividend of £12,500 on the ordinary shares, making (with the dividend paid) 10 per cent. per annum. There will be a balance of £12,685 to carry forward.

MAYFIELD (DIMBULA) TEA.—The profit and loss account shows a profit of £3,241, and this, together with the balance brought forward from 1899, makes a total of £4,899. It is now proposed to pay a dividend of 3 per cent. on the ordinary capital, leaving a balance of £239 to be carried forward.

METROPOLITAN ASSOCIATION FOR IMPROVING THE DWELLINGS OF THE INDUSTRIOUS CLASSES.—The statements of account for the year ended March 31st show an increase in the receipts from the gross rents of £227, the amount received being £25,953. After meeting the expenditure for the year there remains a balance to the credit of the revenue account of £8,805. From this the directors recommend a dividend upon the ordinary consolidated stock of 2¼ per cent. (free of income-tax), making, with the interim dividend paid in January, 4½ per cent. for the year, leaving £156 to be carried forward.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.—The report for the half-year ended March 31st states that the freight returns of the half-year show a diminution of nearly £100,000 compared with the corresponding period of last year. The expenditure has risen largely. Coals, labour, provisions, and stores generally show marked advances on the figures of recent accounts. It may therefore be understood that if the accounts for the half-year show on the whole a favourable result, which happily is the case, it is owing, in a large measure, to the transport work, in which so many of the ships have been engaged during the period to which this report refers. The directors have declared an interim dividend on the preferred stock at the rate of 5 per cent. per

annum, and [illegible] deferred stock at the rate of 7 per cent. per annum.

SOUTHWARK AND VAUXHALL WATER.—The report of the directors made up to March 31st states that the development of the necessary works required by Parliament and to meet the growing demands of the district has naturally resulted in an increase in the debenture interest. This is, however, much more than covered by the enhanced receipts of the company and leaves a considerable margin available for dividend; but the many exceptional expenses, especially the extraordinary advance in the price of coal, amounting in the aggregate to a considerable sum, have reduced the profit available for distribution. Although this may be only a passing condition, the directors regret that it necessitates a reduction of dividend, and they accordingly recommend for the present half-year that a dividend at the rate of 5 per cent. per annum on the preference stock and 6 per cent. per annum on the ordinary stock, and class "D" shares, of the company be declared payable on and after July 15th.

WM. CORY AND SON.—The report for the year ended March 31st shows a net profit, after charging all expenses and cost of maintenance and making provision for depreciation, of £386,788, which, together with the balance brought forward, makes a total of £419,022. After providing for debenture interest and preference dividend and deducting the interim dividend of 4s per share on the ordinary shares, there remains an available balance of £305,933. The directors have applied out of this balance £20,000 to the insurance fund for steamers and £30,000 towards the premium which will become payable on the redemption of the debenture stock after December 31, 1906; they further propose to add £100,000 to the reserve fund, thus raising it to £250,000. There will then remain a balance of £156,933, and the directors recommend a further dividend on the ordinary shares of 6s per share, making with the interim dividend already paid 10 per cent. for the year. They propose in addition to distribute a bonus of 5s per share, which will leave a balance of £46,933 to be carried forward.

YOUNG'S PARAFFIN LIGHT AND MINERAL OIL.—The report for the year ending April 30, 1901, states that after debiting to revenue £30,362 for maintenance and renewals, the amount at credit of profit and loss account, including the balance of £1,826 brought forward from the previous year, is £84,556. The directors recommend that this amount be apportioned as follows:—General depreciation, £20,000; account of expenditure on new retorts, £20,000; vitriol chambers replacement, £6,314; interest on debenture bonds and loans, £20,477; dividend of 3 per cent. on the ordinary shares, £13,584; balance to be carried forward, £4,281—£84,556.

DAY DAWN BLOCK AND WYNDHAM.—The report for the year 1900 states that the receipts from all sources amounted to £143,088, and the expenditure to £85,595, leaving a balance of £57,493. This sum, added to £24,567 brought forward, gives a total of £88,060 to be dealt with. Four interim dividends have been paid during the year, amounting together to 2s per share, and absorbing, with colonial tax, £52,332, leaving a balance of £35,728, and the directors recommend a further dividend of 6d per share, making 2s 6d per share, for the year 1900, carrying forward (after providing for colonial tax) £22,645 to next account. During the year 36,960 tons of quartz have been raised and crushed, and 39,060 tons of tailings (sand and sludges) have been treated at the cyanide works, for a total yield of 52,382 ounces of bullion, realising, with a small quantity of sludge sold, £148,803. The average price obtained for the gold from the battery has been £3 9s 6d per ounce, and for the bullion from the cyanide works £1 17s 5d per ounce, as against £3 10s 9d and £1 10s 1d per ounce respectively in 1899.

TREASURY.—The secretary has received the following cablegram from Johannesburg, dated June 5th: "50 stamps, running 22 days, crushed 5,200 tons; yield, 2,670 ounces. Estimated profit, £5,100."

STOCK EXCHANGE NOTICES.

The Committee have appointed special settling days as under:—

THURSDAY, June 13th.

Kootenay (Perry Creek) Gold—28,000 Vendors' Shares of £1 each, fully paid, Nos. 20,001 to 48,000; Mid-Meonta Copper—59,723 Vendors' Ordinary Shares of £1 each, fully paid, Nos. 1 to 59,723, and 39,277 Vendors' Six per Cent. Cumulative Preference Shares of £1 each, fully paid, Nos. 8 to 39,284.

WEDNESDAY, June 19th.

Akoko Gold—50,000 Shares of £1 each, 12s 6d paid, Nos. 75,001 to 125,000; Atlas Gold—270,000 Shares of £1 each, fully paid, Nos. 1 to 270,000; British Electric Traction—Further issue of 30,000 Six per Cent. Cumulative Preference Shares of £10 each (issued at £1 10s premium), £7 10s paid (of which £6 is capital and £1 10s is premium), Nos. 160,001 to 190,000; Mazawattee Tea—Provisional Certificates for 26,000 Five per Cent. Cumulative Preference Shares of £5 each, fully paid, Nos. 54,001 to 80,000; Slough Creek—158,146 Shares of £1 each, 19s paid, Nos. 8 to 158,153; Wassau Gold Reefs—40,000 Shares of 5s each, fully paid, Nos. 1 to 7 and 200,008 to 240,000, and 200,000 Vendors' Shares of 5s each, fully paid, Nos. 8 to 200,007.

And ordered the undermentioned securities to be quoted in the Official List:—

British Electric Traction—Further issue of 2,074 Ordinary Shares of £10 each, fully paid, Nos. 120,001 to 122,074; City of Monte Video—Further issue of £30,278 Six per Cent. Bonds (Redeemable), Nos. E. 7,967 to 9,477 of £20, and No. 9,672 of £58; Gill McDowell Jarrah—125,000 Ordinary Shares of £1 each, 18s 6d paid, Nos. 1 to 125,000, and 120,489 Six per Cent. Cumulative Preference Shares of £1 each, 18s 6d paid, Nos. 1 to 120,489; H. E. Randall—60,000 Six per Cent. Cumulative Preference Shares of £1 each, fully paid, Nos 1 to 60,000; Jamaica Government—Further issue of £166,100 Three-and-a-Half per Cent. Inscribed Stock; Rhodesia Railways—£2,000,000 Five per Cent. First Mortgage Debentures, Nos. 1 to 2,400 of £10 each, 2,401 to 3,000 of £50 each and 3,001 to 22,460 of £100 each; Whitechapel and Bow Railway—£187,330 Four per Cent. Debenture Stock.

The Commercial Times.

THE CORN TRADE.

Mark Lane, Friday Evening.

Although deriving a good deal of benefit by recent showers, the country still stands in need of rain, this being more particularly the case in regard to root crops and spring corn. Winter-sown wheat is spoken of satisfactorily, especially on well-farmed soils. A generally quiet feeling has been the prevailing feature in the market throughout the week, the attendance of buyers being on a small scale, which was accountable to the attraction of Epsom, and beyond wants of immediate necessity scarcely any disposition was shown for business in breadstuffs. The quantity of home-grown wheat is without expansion, and, consequently, holders required full prices, the actual volume of trade, however, being quite of a retail character. Foreign descriptions mark no quotable change, holders, notwithstanding a very quiet demand, being indisposed to grant concessions in order to extend sales. Australian coming forward more freely shows some weakness, however, but a steady range of currencies has been maintained for New Zealand qualities. The flour market has continued in a quiet state, continued heavy arrivals exercising a baneful influence, as, under the circumstances, consumers do not extend purchases. Australian brands pass slowly into consumption. Crop accounts from Germany continue very unfavourable, but in France beneficial rains have improved the outlook. The floating and forward shipment department for wheat commenced with a steady, although quiet, tone, and a better inquiry subsequently for white descriptions tended to stimulate values for these, while a fair amount of business was effected. The Cawdor, 15,500 quarters Californian, February 13th bill of lading, sold, 29s 10½d; 13,000 quarters, ditto, loading, 29s 9d; the Auldgirtle, 11,200 quarters, March 14th, at 29s 9d; and the Inverneill, 9,500 qrs, same quality, loading, at 30s. The Nivelli, 16,000 qrs, Walla-Walla, June, realised 29s 7½d; the Nereno, 13,000 qrs, May 13th, 29s 7½d, and the Tarpenhuk, 12,800 qrs ditto, 29s 9d. Blue stem, 10,500 qrs, per Incheape Rock, changed hands at 29s 7½d, off coast; 12,150 qrs, per Nereide,

April 11th clearance, 29s 9d, and 16,000 qrs ditto, July, 29s 6d; with the Cypromene, 12,600 qrs half red Walla, and half blue stem, just sailed, at 29s 7½d. The Simla, 17,000 qrs New South Wales, March 28th, went at 29s 7½d, and Procyon, 15,500 qrs South Australian, February 11th, at 29s 7½d. For Victorian, afloat, sellers asked 30s. A steamer cargo La Plata, 59½ lbs, guaranteed shipment within 21 days, went at 28s 10½d. Later sales passed include the Flintshire, 8,400 qrs Californian, arrived, at 30s 3d; the Merioneth, 9,290 qrs, same quality, March 29th, 30s; the Bekere, 968 tons, f.a.q., Rosario-Santa Fé, arrived, at 28s 9d; and 800 tons superior Rosario-Santa Fé, per Rackel, arrived, at 29s 3d. Only a small amount of business has been stirring in parcels, but sellers were not much in evidence and steady prices were realised. No. 1 Northern Spring, June-July, sold, 29s; due, 29s 1½d; and July, 29s. Soft red Calcutta, June 15th, made 29s 6d. The quantity of wheat and flour on passage for the United Kingdom is estimated at 3,265,000 qrs, against 3,020,000 qrs at corresponding period last year, which brings the total amount afloat for Europe up to 5,245,000 qrs, as compared with 4,650,000 qrs in 1900. American shipments of wheat to Europe during the past fortnight amount to 893,500 qrs, including 102,500 qrs from the Pacific seaboard. Malting barley nominal, the season having terminated. Grinding sorts have been in only moderate supply, which, however, proved fully adequate to buyers' limited requirements, and currencies are a shade cheaper. A general tone of quietness has pervaded the cargo section for this grain, but holders exercised reserve, and rates have been very steady. For cargoes of Azoff, afloat, 17s 9d is required; 17s 1½d, August-September; and 17s for September-October; while 17s 6d was obtainable for shipment by August 15th. The George Clarkson, 11,900 qrs Ghenighesk, May 30th, realised 17s 7½d. The spot demand for maize has not ruled very brisk, but with only a moderate quantity on offer, a fairly steady feeling predominated in regard to values, although towards the close flat sorts were rather in buyers' favour. In the cargo section, American mixed sorts have been held off the market, while a fair trade has been stirring in round qualities at fully steady values. A cargo, Danubian afloat, made 18s 7½d; 13,000 qrs, June 15th, 18s 6d; 12,000 qrs all June, 18s 6d; 17,000 qrs shipment by July 7th, 18s 6d; and the Shakespeare, 11,000 qrs same quality, due out to load, at 18s 7½d. 12,000 qrs Galatz, May, old style, realised 20s 6d. The Cavendish, 10,500 qrs Poti, loading, sold 18s 7½d; 14,000 qrs Danubian, June dispatch, 18s 6d; the Mandalay, 10,300 qrs ditto, June 5th clearance, at 18s 7½d; and the Charlton, 11,500 qrs, Turkish-Bulgarian, at Gibraltar, at 18s 6d. For a cargo Poti, due at Gibraltar, 18s 6d was bid and 18s 9d asked. American mixed parcels, arrived, sold 19s 1½d; May, 19s 1½d. Oats on spot have been in fair supply as far as American kinds are concerned, and with a sustained demand rates are steady, but Russian in heavier supply moved downward. To arrive, a firm but quiet tone predominated. American mixed clipped, afloat, 36 lbs, sold 14s 4½d. Beans and peas idle. The market denoted nothing fresh to-day, the demand from only a small attendance of buyers being quiet, but sellers were not much in evidence, and asked recent rates. English wheat nominal, only retail quotations coming forward. White, 29s to 31s; red, 27s to 30s per qr. Foreign sorts quiet, but not quotably easier, although American qualities were the turn in buyers' favour. Flour keeps very quiet, while good supplies are arriving. Grinding barley unchanged. Oats steady for American, but Russian depressed. Flat maize 6d down on the week, round being steadily held. The wheat cargo market to-day has been very quiet, and prices are generally 3d lower. 29s 7½d was paid for Alex Laurence. 8,390 quarters Victorian, arrived. 27s 6d net was taken for Persian Prince. 2,800 tons La Plata, on sample, afloat. For 12,000 quarters Californian, August-September, 30s was accepted. Ocean, 9,000 quarters Victorian, May, sold at 29s 9d. Argentine shipments for the week are given as 99,000 quarters. Parcels easier. 28s 4½d was paid for No. 1 northern spring, July. White Karachi, June-July, sold, 29s, to London. Maize easier for La Plata, but steady for round sorts. 18s 7½d was accepted for Garlands. 12,930 quarters Danubian at Gibraltar. La Plata, June-July, 3,500 tons, has sellers at 18s 3d. Argentine shipments, 120,000 quarters. Parcels: 18s 9d was paid for mixed American afloat, and 18s 6d June shipment. Barley quiet. 13,000 quarters Danubian Kustendji-Bessarabian, August-September, old style, has sellers at 16s 10½d. Oats slow. 15s was paid for 38 lbs white clipped, June shipment.

The London Produce Clearing House, Limited, supply the following:—

Wheat Quotations.

Basis No. 1, Northern spring wheat, Duluth certificate per 100 lbs, ex warehouse in London.

THE IRON AND COAL TRADES.

There is not much change to note in the iron and steel trades, business has been on a fairly good scale. The pig-iron warrant market at Glasgow has been dull, which has been characteristic

for some time, but prices are about the same on balance. Buyers, 53s 8½d cash; 53s 9½d one month; sellers ½d more. Stocks in Connal's stores (Friday), Glasgow, 59,804 tons; Middlesbro', 76,192 tons; hematite, 4,502 tons.

Our Middlesbro' correspondent, writing on Thursday, says:—Our market for pig-iron continues quiet, with a moderate business doing. This business is however, confined to prompt lots, buyers for forward delivery still holding off. Shipments of pig-iron are fair, but below the average. Middlesbro' G.M.B., No. 3 pig-iron is 45s 6d per ton, East Coast mixed numbers hematite, 56s 6d to 57s per ton. Manufactured iron and steel is quiet. Steel ship plates, £5 17s 6d; steel ship angles, £5 17s 6d; iron ship plates, £6 15s; iron ship angles, £6 5s; iron bars, £6 13s 6d; less 2½ per cent. discount. Best Bilbao rubio iron ore (50 per cent. iron), 16s; Gellivare (Swedish) iron ore (60 per cent. iron (A grade hematite), 19s; C grade (Cleveland), 14s c.i.f. North-east coast ports.

The *Iron and Coal Trades' Review* writes as follows respecting manufactured iron and steel. In the finished branches of the trade there is a somewhat better tone, and there is apparently more new work coming forward, sufficient, in fact, to keep some of the works running at their full capacity, although short time is still by no means a rarity. Prices, taking them all round, have a stronger tendency, although there are exceptions, as in the case of iron bars in the Cleveland district, which came down to £6 5s for common and £6 15s for best bars. Steel ship-plates, on the other hand, have gone up to £6 again. In South Staffordshire, the marked bar houses report more frequent enquiries, and they are able to secure £8 10s without difficulty, while the improved position of black sheet makers is maintained. Lancashire hoops are down 10s. In the steel trade there is some activity, and a rising tendency in prices. Heavy steel rails are quoted at £5 net at works in the north of England.

The coal trade is in a satisfactory condition in most parts of the country, and in some parts there is a tendency to raise prices. At Newcastle the pressure which succeeded the holidays has now been relieved, and the coal trade is settling down to a steady regular business. There is still difficulty in getting foreign contracts on account of the coal tax, particularly from areas where the Westphalian syndicate can compete, and even in Italy buyers show a disposition to see what terms they can get from American owners rather than close with English merchants. Leading turns, whilst in no respect congested, are filling out steadily for June shipment, and the leading collieries have the promise of fully as much trade as they can deal with. There is not much prospect of prices receding for best Northumberland steam, which stand firm at 13s to 13s 6d per ton, at which figures July arrangements have already been opened. Steam small coals are quiet. Best makes 6s per ton, but as a general thing 5s 6d represents the market. A Lancashire report states that for all descriptions of fuel only a very slow demand is reported throughout the South-West Lancashire district. and, notwithstanding the holiday stoppages of the pits, supplies are ample for requirements. For house fuel qualities, the demand has fallen off considerably, and this branch of trade is now entering upon the usual quiet summer season. The reduction in prices by the Manchester colliery firms announced last week has been followed in this district by a general reduction of 1s 8d per ton on all descriptions of house fire coals, including cobbles and nuts, and at the pit mouth the average quotations are now about 15s to 15s 6d for best Wigan Arley; 13s to 13s 6d for seconds Arley and Pemberton four feet, and 11s to 11s 6d for common house fire coals. In South Wales the quotations are as follow:—Best steam coal, 18s 6d to 18s 9d; best seconds, 17s 6d to 17s 9d; seconds, from 17s; dry, 16s to 16s 6d; best Monmouthshire large, 16s to 16s 6d; seconds, 15s 3d to 15s 6d, and other sorts from 13s 6d; best semi-bituminous, small, 8s to 8s 6d; and seconds, 7s to 7s 6d; patent fuel, 15s 6d to 16s 6d; foundry coke, 18s 6d to 19s 6d; and furnace, 16s to 17s per ton; pitwood easier—17s per ton.

THE COTTON TRADE.

LIVERPOOL, June 6.

Cotton has been in rather better demand at hardening rates, and quotations generally show an advance. The Bank rate has this day been reduced from 4 to 3½ per cent. Sea Island continues in moderate demand at steady rates. Forwarded this week 377 American Sea Island. In American a fair business has been done, and prices have had a hardening tendency. Quotations are raised 7-32d per lb. In Brazilian a small business has been done, and quotations are advanced 1/16d to ⅛d per lb. Egyptian has been in moderate request, and quotations are unchanged. In rough sorts of Peruvian more business has been done at easier rates, and quotations are reduced 1/16d per lb. Smooth is 3/16d per lb higher, but quotations are nominal. In East Indian rather more business has been done, and quotations of Tinnivelly are advanced 1/16d to ⅛d per lb.

"Futures."—The market for American has been more active, and after various fluctuations the closing prices show 10-64d to 12-64d per lb advance for old, and 6-64d to 8-64d per lb for new crop deliveries as compared with last Wednesday's Circular rates. The following are the closing values of Egyptian—Delivery: F.G.F., June, 5 21-64d; July, 5 24-64d; August, 5 27-64d; September, 5 28-64d per lb.

The amount of cotton forwarded this week is 50,693 bales, and actually exported 9,959 bales. The decrease of stock this week is 10,300 bales. The sales (five days) amount to 37,240 bales, of which 600 are on speculation, and 1,820 declared for export.

Imports, Exports, Consumption, &c.

	1901. Bales.		1900. Bales.
Imports from Jan. 1 to June 6	1,664,984	.....	1,621,019
Exports from Jan. 1 to June 6	123,405	.....	168,270
Stock, June 6	748,940	.....	945,980
Consumption from Jan. 1 to June 6	1,420,412	.....	1,625,262

These figures show:—

	Bales.
An increase of imports compared with the same date last year of	43,970
A decrease of actual exports of	42,860
A decrease of quantity taken for consumption of.....	204,850
An increase in stock of	204,960

In speculation there is a decrease of 9,670 bales.

The imports this week have amounted to 50,273 bales, and the quantity of American cotton reported at sea for Great Britain (including cable advices to date) is 70,000 bales, against 40,000 bales at the corresponding period last year.

Since the resumption of business after the holidays a fair amount of business has been done in cloth for India. It has per-

haps been unevenly distributed; for some manufacturers report scarcely anything going on. China has been quiet, though the outlook is considered more satisfactory. A number of weaving sheds have been running short time, and are still working fewer hours per week than usual. Home American yarns have been dearer as compared with before the holidays, owing to the hardening of American cotton during the last couple of days or so. The business doing, however, in cops, has been unimportant. Shipping descriptions remain quiet at late rates. Bolton spinnings show no improvement whatever. The demand being dragging and generally unsatisfactory.

THE WOOL TRADE.

Trade remains in the same lifeless state. The new clip of English wool comes to hand very slowly, farmers being unwilling to take the low prices which staplers are obliged to offer.

Messrs Ronald and Roger's monthly report, dated June 5th, on the Liverpool wool sales is as follows:—Miscellaneous clothing wools were brought forward on April 16th, but of 10,305 bales offered only 3,500 bales changed hands, chiefly washed Peruvian, at ¼d to ½d per lb decline from previous quotations, with some unwashed Chili at relatively steadier prices. The fourth auction of River Plate wool for this season took place on April 17th, when 5,846 bales were catalogued, and 5,150 bales sold, with a rise of ¼d per lb from February rates on merinos, while crossbreds lost ¼d to ½d per lb. The fifth sale will be held on the 12th instant, when 5,000 bales will be available. The third series of East India wool auctions lasted from May 21st to 23rd, when 17,835 bales were brought forward, including nearly 3,000 bales native skin, goat hair, &c., and a good many shipments in unusually dirty condition, so that, on the whole, the selection was less attractive than usual. The bidding, at no time very brisk, was fairly steady, especially for middle yellows wanted for France, but orders from America were scarce. Compared with March figures, Joria and Kandahar whites went about ¼d per lb cheaper, other clean sorts being practically unaltered, and wasty yellows, greys, &c., ¼d to ½d per lb down. Adding some placed immediately afterwards, the total quantity disposed of was 13,700 bales, of which 9,450 bales went to the home trade, 3,100 bales to France, and only 1,150 bales to America. Miscellaneous foreign wools were catalogued yesterday and to-day as follows:—

COMPING.

	Offered. Bales.		Sold. Bales.
Egyptian	1,123	....	750
Oporto	2,275	....	850
Kassapbatchia, &c.	2,064	....	300
Syrian, &c.	1,124	....	350
Sundries	535	....	200
Totals	7,121	....	2,450

CLOTHING.

	Offered. Bales.		Sold. Bales.
Peruvian	4,304	....	700
Chili and Lima	2,183	....	200
Morocco	837	....	50
Spanish	562	....	..
River Plate skin, &c.	355	....	100
Totals	8,241	....	1,050

A moderate number of regular users of combing kinds did not show much eagerness, nevertheless a fair proportion of the Egyptian and Oporto changed hands at about ¼d per lb under March. Washed and greasy Syrian attracted some attention, but too little was done in Kassapbatchia skin, &c., to test prices. To-day those who came were mostly onlookers without any inclination to operate, and practically nothing was done beyond a few Peruvians at ¼d to ½d per lb decline, the offers refused being often quite 1d per lb under April prices.

Our Bradford correspondent, writing on Thursday, says:—Since May 1st there has been a further slump in wool values. A large sale of South American crossbred in Liverpool early in the month was a great revelation to the trade, and during the last week or two forties crossbred tops (combed wool), which up to this year had never been below 9¾d, have been hawked about at 8½d, and even 8d per lb. It is quite obvious that English and Irish half-bred wools, with 33 per cent. shrinkage, are altogether too dear even at 6½d per lb to compete with the enormous quantities of the imported article which the trade is having to deal with. What will be the result of the country fairs, which will be held during the next six weeks, is difficult to say. Farmers may prefer to hold their wool, a course which would be entirely satisfactory to this market, but which cannot affect values, for the home-grown clip is of very secondary importance since the flockmasters in New Zealand and South America have turned their attention to growing sheep for the frozen mutton trade.

Messrs Chas. Balme and Co.'s sheepskin report is as follows:—The fourth series of public sales of woolled sheepskins of the present year was held on the 6th inst., the quantities catalogued being as follows:—New South Wales, 353 bales; Queensland, 4; Victorian, 726; South Australian, 913; West Australian, 439; Tasmanian, 505; New Zealand, 661; Cape, 608; Buenos Ayres, 20; Punta Arenas, 444. Total, 4,673 bales. There was the usual attendance of buyers, who competed freely for full-woolled merinos at the rates current in April; prices for the shorter growths, however, ruled somewhat below that level. Demand for crossbred skins was distinctly unsatisfactory, and values for these descriptions marked an average decline of 7½ per cent.

THE LEATHER TRADE.

The demand for leather during the past week has been of a very retail character. Prices show little variation. Australian sides move off fairly well at late rates. Australian and New Zealand basils continue in short supply.

FOREIGN AND COLONIAL PRODUCE MARKET.

For Reports of To-day's Business and Public Sales see "Postscript."

Mincing Lane.

SUGAR.—A general tone of steadiness has characterised the market throughout the week, but the demand has not been of a very encouraging nature, the trade being generally indisposed to enter into engagements beyond wants of actual necessity, and, as a result, the volume of business in all refined sugars has been confined to a moderate compass. Raw kinds slow. To refiner's good second runnings basis, 75 per cent. have been sold at 7s 3d, and firsts 88 per cent., 9s 5½d, f.o.b. The world's visible supply at the moment stands at 2,244,270 tons, as compared with 1,940,120 tons at corresponding period last year.

HOME REFINED.—A moderate business has been doing in cubes at late rates. No. 1, 19s 6d; No. 2, 18s. Pieces steady, unchanged, but in quiet request. Yellow crystals remain at 15s 6d to 16s, as to make.

FOREIGN REFINED.—Cubes are nominally unaltered, trade ruling slow. Say's, June-August, 13s; Meyer's ditto, 13s 3d; F.M.S., 12s 10½d, f.o.b. French crystals, spot sellers, 15s. German granulated is steady, but only a small trade has been doing. Ready first marks, sold, 11s 0½d; June, at 11s; and July-August, 11s; October-December, value, 10s 4½d, f.o.b.

BEET.—Market has remained quiet, and prices are generally easier. June, sold, 9s 4½d, 9s 5d, and 9s 4½d; August, 9s 5½d, 9s 6¼d, and 9s 5½d; September, 9s 5d; October-December, 9s 0½d to 9s, f.o.b., Hamburg.

CANE-GROWN.—At public sale on Tuesday, 600 tons crystallised Trinidad were offered, and met a slow demand, the tendency of prices being weak. Good bright yellow, sold, 16s 9d to 17s; medium yellow, 16s 3d to 16s 6d; low middling, very small grain, 16s per cwt.

Imports and deliveries of sugar into London from January 1st to 1st inst., with stock at latter date:—

Contracts for 42,000 bags Santos coffee registered during the week.

COCOA.—At resumption of public sales on Tuesday, 5,342 bags Colonial and 1,642 bags foreign were brought forward, a generally fair demand being experienced for British West India, and Trinidad realized steady rates. Grenada firm for fine, one special pile of superior red selling at 1s rise, viz., 69s; medium qualities being held for late prices did not clear very freely, while common grades were quiet and generally easier. Other British West India ruled generally steady. Ceylon quiet, with a weak tendency. Guayaquil slow. 1,436 bags Ceylon, partly sold, fair bold red, 77s to 79s; brownish, 68s; medium dull red, 61s 6d; broken, 51s to 61s; pickings, &c., 49s 6d to 52s. 1,075 bags Trinidad: fine red, 75s 6d to 76s; fair to good, 71s to 73s. 2,264 bags Grenada: superior red, 69s; fine, 67s to 68s; good, 66s to 66s 6d; fair ordinary to fair, 63s to 64s 6d; common and palish, 61s to 62s 6d. 36 bags St. Vincent: fine bright red, 70s; good, 66s 6d; fair, 63s to 63s 6d; ordinary 64s 6d. 16 bags St. Lucia: good red fermented, 63s to 65s; pale ordinary, 59s to 60s. 176 bags Dominica: fair to good, 63s to 64s 6d; ordinary pale and hard, 61s to 62s. 20 bags Surinam: fine fermented, 72s. 47 bags Demerara: good fermented, 71s. 436 bags Guayaquil, partly sold: dried, 68s. 81 bags Esmeralda, ditto, 62s. 443 bags Hayti: red, 62s to 64s; grey, 56s to 56s 6d. 366 bags African: red, chiefly fermented, 64s. 56 bags Colombian, few sold, 62s per cwt. 60 bags Porto Cabello and 200 bags St Thomas retired. Privately 150 bags fine Grenada sold, 65s 6d to 67s; and 360 bags African, 64s to 64s 6d per cwt.

COCOA POWDER.—20 cases Cadbury's sold, 1s 6½d to 1s 5¾d per lb.

COCOA BUTTER.—350 cases Cadbury's sold, 1s 5½d to 1s 5¾d per lb.

COCOA SHELLS.—1,580 bags sold: A, 125s to 132s 6d; B, 95s to 130s; C, 90s to 115s; and D, £13 7s 6d to £14 12s 6d per ton.

TEA.—Only 9,500 packages Indian were brought forward during the week, and met with steady competition, prices realised comparing favourably with those current prior to the Whitsuntide recess. 28,000 packages Ceylon were submitted and with fair inquiries passed off at steady prices, while 1,000 packages Java marked no appreciable alteration. Only restricted sales are passing in China qualities.

RICE.—The market has continued in a very firm condition, but only a limited amount of business has been doing. A steamer cargo, No. 3 cleaned, Rangoon, June, sold 7s 9d, c.f. and i., Levant,

Continued from page 882.

and 100 tons No. 1 broken, July-August, at 6s 9d, ex ship, London. Meal inactive, and nominal.

BLACK PEPPER.—No auction was held this week, and by private treaty business has been of a limited character. Singapore, on spot, basis fair, 6½d per lb.

WHITE PEPPER.—Business all round keeps very quiet, and for arrival quotations are nominal.

CLOVES have ruled steady, but rather quiet. Zanzibar, June-August, sold 3½d; August-October, 4d; and October-December, 4d per lb.

FRUIT.—Only a moderate business has been doing in currants, but prices remain firm. Provincial, sold, 32s 6d to 33s 6d per cwt.

JUTE.—There have been virtually no offers during the week from Calcutta, and here holders of secured parcels have been scarcely in evidence, while the market all round remains in a firm state. Native first marks, May-June, canal, London, have been offering at £14 17s 6d, and new crop, August-September, £14 10s, c.f. and i.

HEMP.—The inquiry has shown no appreciable increase, and only a small trade was concluded, prices, however, remaining steady. Fair current, on spot, sold, £33 10s; good current, May-June, £41 10s; and S.B.C.M., May, £36. New Zealand steady. 25 tons good fair, Wellington, August, sold, £24, and September, £23 10s, c.f. and i.

SHELLAC.—Business in spot parcels is of a quiet character, and at late rates only small sales transpired. Futures firm, with sales in T.N., June, at 61s 6d; and August delivery, at 62s 6d per cwt. Gambier steady, unchanged, but in rather slow support. 100 tons, April-May, sold, 19s 4½d per cwt.

QUININE dull, with prices tending in buyers' favour. B and S, &c., October, sold, 1s 4½d per ounce.

METALS.—The market for tin opened flat and easier, but rallied later in the week. After commencing at £129 10s cash, £127 15s three months, Straits relapsed to £128 12s 6d, and £126 12s 6d, down to £127 10s, and £124 15s being accepted in the positions on the following day, but by the middle of the week some irregularity prevailed, while on balance gains were registered, cash warrants closing after official hours at £128; and three months, prompt, at £125. Thursday's market exhibited a vitality and increased strength on fairly active buying, the price of Straits for cash being carried up to £130 10s, and three months prompt to £127 10s. Statistics of copper, published last Monday for the past month, pointed to a decrease of 304 tons in the visible supply. The tone, although slow, has, on the whole, been remarkably well maintained during the week. Spot standard opened rather lower at £69 2s 6d to £69 5s, and £69 12s 6d to £69 15s three months, but improved slightly on the following day, with business in these positions at £69 6s 3d to £69 7s 6d, and £69 16s 3d to £69 17s 6d, while the situation remained in sellers' favour during the middle of the week, scarcely any change being recorded since last Thursday. Lead steady, but quiet, the last paid for soft foreign prompt being £12 10s. English, £12 12s 6d to £12 15s. Spelter against sellers. Ordinary brands, £17 10s; special nominal. Iron fairly maintained.

OILS.—Linseed quiet and easier. On spot, in pipes, £33, and barrels, £33 5s; month, £32; July-August, £30; September-December, £27; Hull, spot, naked, £32; June, £31 10s; July-August, £29 10s; September-December, £25 15s. Rape quiet. Brown, on spot, in barrels, £28; July-August, £27; September-December, £26; Ravison, naked, £24 5s. Cotton firmer. Refined on spot, £22 5s to £23, as to make, and crude, £20 15s. Hull, refined, £21; July-August, £21 5s; November-April, £18. Ceylon cocoanut remains scarce, on spot, at £26 to £26 10s. Shipment easier, and £23 15s, £23 10s, c.i.f. Cochin, on spot, £30. Forward, £28 per ton, c.i.f., asked.

TALLOW.—Some 2,270 casks Australian and New Zealand were offered in auction, and 830 casks found buyers. Mutton being occasionally easier. Fine mutton quoted, at 28s to 28s 6d; fair to good, 27s to 27s 9d. Fine beef, 26s 6d to 26s 9d; fair to good, 25s 9d to 26s 3d. Shipments from the colonies during last month 4,790 tons, against 5,040 tons same time last year.

TURPENTINE easier. On spot, 26s 6d; July-December, 25s 9d to 26s; January-April delivery (1902), 26s 6d per cwt. Stocks at public wharves 1st inst.: 5,240 barrels, against 1660 barrels; in course of landing, 2,500; deliveries during the week ending 1st inst., 2,144, against 1,060; and afloat, for London, 8,360 barrels, against 16,250 barrels.

ROSIN.—Common strained rules at 4s 9d, ex-wharf. Afloat, 5s 2½d quoted, with June-August and August-October at 4s 2d per cwt.

PETROLEUM neglected and easier. American, 5¾d to 6d; Russian, 4¾d to 5d; water white, 6½d per gallon.

LINSEED easier, owing to prospects of more liberal arrivals, and a quieter oil market. Calcutta, to London, on spot, 51s; afloat, 51s; May-June, 50s 6d to 50s 9d. La Plata, spot, 49s; May-June, 48s 6d; December-January, 45s 6d. To the Continent: Bombay, May-June, 53s 6d; Calcutta, May-June, 51s. Imports into London since January 1st, 163,370 qrs, against 281,230 qrs in the corresponding time last year. Afloat, from the East Indies and River Plate, including cable advices, 250,000 qrs, against 150,000 qrs.

RAPESEED in better request, and firmer. Yellow Cawnpore, May-June, 42s; brown Cawnpore, 38s 6d, to the Continent. Yellow Guzerat, June-July, 45s 6d. Yellow Cawnpore, 42s; brown Cawnpore, 39s. Ferozepore, June-August, 39s; Jamba, 28s 6d; Ravison, May-June, 30s. Imports into London since January 1st, 14,470 qrs, against 18,500 qrs, and afloat, from the East Indies as per last advices, 8,000 qrs, against 7,000 qrs.

COTTONSEED dearer for London, Hull being well maintained. London, £6 10s; June, £6 16s 3d; July, £6 17s 6d; August, £6 18s 9d; November-January, £6 2s 6d. Hull, spot, £6 11s 3d; June and July, £6 12s 6d; October, new crop, £6 8s 9d; November-January, £6 to £6 2s 6d. Cargoes, June and July, £6 18s 9d. Imports into London since January 1st, 25,130 tons, against 24,940 tons same time last year.

TOBACCO.—Some moderate business was done during the week in Virginia, but all other growths were neglected.

POSTSCRIPT. Friday Evening.

SUGAR.—In the home refined market a fair business was done in cubes at late rates. Pieces and crystals steady, unchanged. At public sale 220 tons crystallised met a slow demand, prices tending in buyers' favour. 1,105 bags crystallised Trinidad half sold

medium yellow, 16s 3d, one cut in lot, 16s 6d. 624 bags Demerara, few lots sold: fine colory, 17s 6d. 589 bags crystallised central American: dull grey, washed, realised 14s 6d. 200 bags Demerara syrups partly sold, 12s 3d. 150 bags St Lucia, 12s 6d to 12s 9d. 1,825 bags Argentine: middling yellow, 13s 3d; colory, white lumpy, 14s 9d per cwt. 124 bags Muscovado St Lucia and 380 bags ditto Jamaica retired. German granulated slow, unchanged. Beet, dull, August sold, 9s 5¼d to 9s 5d; October-December, 8s 9¾d, f.o.b.

COFFEE.—Futures quieter. September sold 30s 3d to 30s 1½d; December, 30s 7½d, 30s 6d, and 30s 7½d; and March 31s 1½d per cwt.

JUTE.—New crop in better demand, old being unchanged. 1,000 bales native first marks, August, canal, London, realised £15 2s 6d; 500 bales, August to September 15, ditto, £14 15s; and 500 bales, September, £14 10s, c.f. and i.

METALS.—Copper firm, but inactive. Spot standard closed with buyers at £69 5s, and three months, prompt, at £69 15s. Estimated sales during the week, 2,000 tons. Tin dearer for cash warrants, while, after commencing stronger forward, the tone eased, and after official hours there were buyers of Straits, for cash, at £131 7s 6d, and three months, prompt, at £127 10s. Sales during the week reach rather over 3,000 tons. Lead and spelter unaltered since Thursday. Iron rather firmer to-day. Scotch pigs closed at 53s 9d cash, 53s 10½d one month. Cleveland, 45s 3d cash, 45s 5d month. Hematite, 57s 6d cash, 57s 7d per ton one month. Quicksilver unaltered at £9 2s 6d per bottle.

INDIA-RUBBER.—No auctions were held to-day. During the week business has been passing in fine hard Para, spot and June-August delivery, at 3s 9d. Peruvian ball, July-August and September, sold 2s 4½d to 2s 4½d per lb.

COCOA

BREAKFAST—SUPPER.

Portsmouth Corporation 3% Redeemable Stock.

Issue of such an amount of Stock as may be necessary to raise the sum of £556,711, and the expenses of and incidental to the issue.

Price of Issue £95 per Cent.

First Half-yearly Dividend payable in full 1st January, 1902.

Special attention is directed to the fact that the Trustee Investment Act authorises a Trustee, unless expressly forbidden by the instrument (if any) creating the Trust, to invest Funds in this Stock.

ABRIDGED PROSPECTUS.

The National Provincial Bank of England Limited, is authorised by the Corporation of the Borough of Portsmouth to receive applications for an amount of Stock sufficient to realise the sum of £556,711, in addition to the expenses incidental to the issue. The Stock will be issued at the price of £95 per cent., free from Stamp Duty or other charge.

The Stock will be redeemed at par on 1st July, 1933, or at the same price at the option of the Corporation on or after 1st July, 1913, unless previously cancelled by purchase either in the open market, or by agreement with the Stockholders.

The instalments of the Loan will be payable as follows:—

On application £5 per cent.
On Monday, 17th June, 1901, £20 per cent.
On Wednesday, 31st July, 1901, £20 per cent.
On Monday, 2nd September, 1901, £20 per cent.
On Monday, 14th October, 1901, £20 per cent
On Monday, 18th November, 1901, £10 per cent.

The instalments may be anticipated under discount at the rate of £3½ per cent. per annum.

The Stock will rank *pari passu* with the existing Portsmouth Corporation Redeemable Stock, and will bear interest at the rate of £3 per cent. per annum, payable half-yearly on 1st January and 1st July at the National Provincial Bank of England, Limited, London, or any of its Branches, and Dividend Warrants will be transmitted by post unless otherwise desired.

The books of the Corporation Stock will be kept at the National Provincial Bank of England, Limited, 112 Bishopsgate street, London, where Stock Certificates will be issued and all Transfers must be made by the personal attendance of the Stockholder or his registered Attorney.

All Transfers and Stock Certificates to Bearer will be free from Stamp Duty.

Applications on the prescribed form with the required deposit of £5 per cent. are to be delivered at the National Provincial Bank of England, Limited, 112 Bishopsgate street, London, E.C.

The List of Applications will be Closed on or before 4 p.m., on Monday, 10th June, 1901.

A quotation in the Official List of the London Stock Exchange will be applied for in due course.

Forms of Application may be obtained at the National Provincial Bank of England, Limited, 112 Bishopsgate street, London, or any of its Branches; or at the offices of Messrs J. & A. Scrimgeour, Stockbrokers, 18 Old Broad street, E.C.; or at the Town Clerk's Office, Town Hall, Portsmouth.

6th June, 1901.
